Author's Declaration

I hereby declare that I am the sole author of this MRP. This is a true copy of the MRP, including any required final revisions.

I authorize Toronto Metropolitan University to lend this MRP to other institutions or individuals for the purpose of scholarly research.

I further authorize Toronto Metropolitan University to reproduce this MRP by photocopying or by other means, in total or in part, at the request of other institutions or individuals for the purpose of scholarly research.

I understand that my MRP may be made electronically available to the public.

Abstract

Overcoming Borders and Barriers: A Study of Immigrant Integration with a Focus on South Asian Communities in the Toronto CMA.

Visalakshi Shanmugasundaram MSA 2024 Toronto Metropolitan University

This research provides a comprehensive analysis of the integration patterns of South Asian immigrants in the Toronto Census Metropolitan Area (CMA), focusing on four major ethnic groups: Indians, Pakistanis, Sri Lankans, and Bangladeshis. The study reveals varying levels of integration, with Indian and Pakistani immigrants generally exhibiting higher integration than their Sri Lankan and Bangladeshi counterparts, who tend to maintain stronger ethnic identities. While ethnic enclaves have formed—such as Brampton for Indian immigrants and Scarborough for Sri Lankans and Bangladeshis—there is also evidence of dispersion, particularly among recent Indian immigrants. The study also highlights significant political participation among South Asians, with increased representation at federal, provincial, and municipal levels. The findings emphasize the role of cultural and culinary practices in shaping integration processes and suggest that South Asians are progressively integrating into Canadian society, despite sub-ethnic divisions. The research concludes with policy recommendations aimed at fostering inclusivity while preserving cultural identities, contributing to the ongoing discourse on immigrant integration in multicultural urban settings.

Acknowledgements

I want to extend my heartfelt gratitude to my supervisor, Professor Shuguang Wang, for his invaluable guidance during the development of my MRP. I am also deeply grateful to my second reader, Professor Sutama Gosh, for her insightful feedback and suggestions, which have significantly enhanced the depth of my analysis in this paper.

I would like to acknowledge the unwavering support and encouragement from my husband and children, whose motivation throughout my academic journey is something I will always cherish. Finally, I would like to express my appreciation to the Department of Geography and Environmental Studies for providing me with the opportunity to research a social context using spatial analysis skills. This experience, though different from my background as a Civil Engineer with over ten years of experience in the Public Works sector, has enabled me to leverage my analytical and research skills, drawing meaningful conclusions from data.

Dedication

I dedicate this Major Research Project to my beloved father, Shanmugasundaram. As many have observed, "Like father, like daughter." I have followed in my father's footsteps to become a Civil Engineer and inherited his passion for writing. His insatiable thirst for knowledge and continuous learning has always been a source of inspiration for me. My father pursued graduate studies in Remote Sensing at the Institute for Remote Sensing, Anna University, Chennai, and I grew up surrounded by books. After a dedicated career as a Highway Engineer, he went on to mentor university students and is now writing and publishing books, driven by his love for poetry and literature. His versatility and curiosity have inspired me to explore new fields and broaden my own horizons.

Chapter 1: Introduction

Canada has been experiencing a notable surge in immigration in recent decades, particularly in the densely populated Toronto Census Metropolitan Area (CMA), where immigrants comprise 46% of the population (Statistics Canada 2022a). Observing how immigrants adapt and thrive in the country offers valuable insights into their integration and social cohesion experiences. Immigrant integration is a complex, multifaceted process involving various dimensions that collectively shape how newcomers become part of their host society. This process is characterized by interactions between immigrants and the host community, with success often measured by the degree to which immigrants meet their needs and achieve their aspirations in their new environment (Anisef & Lanphier, 2003).

<u>Goldlust and Richmond</u> (1974) highlight that integration is influenced by both objective factors, such as housing, language acquisition, and employment opportunities (functional integration), and subjective factors, including a sense of belonging and acceptance of the host country's norms (civic integration) (Ray, 2002). In essence, immigrant integration can be defined as the process through which immigrants develop a sense of belonging to the host society by integrating economically, socially, culturally, and psychologically while adhering to the values and norms of that society. This study explores the integration of South Asian immigrants in the Toronto CMA by broadly examining their settlement patterns, including the geographical distribution of immigrants within the region to determine whether they are spatially integrated, their influence on the food landscape while maintaining and sharing their cultural identities, and their participation in the political arena.

According to the 2021 Census of Population, 57% of the 6.1 million residents in the Toronto CMA identify as belonging to a visible minority group (Statistics Canada, 2022b). Among these, the top three visible minority groups are South Asian (1,182,485), Chinese (679,725), and African (488,155) communities. The South Asian population has experienced substantial growth within the CMA. In the 2001 Census, there were 473,810 South Asians in a population of 4.68 million, representing approximately 10%. By the 2021 Census, this number had increased to 1,182,485 South Asians, constituting 19% of a total population of 6,202,225—an increase of 90% over the past two decades. Given their significant size, it is valuable to examine the social and economic circumstances of South Asian immigrants from countries such as India, Bangladesh,

Pakistan, and Sri Lanka, and to assess their settlement patterns and degree of integration within the broader society.

This research aims to delve into the experiences of South Asian immigrants across various stages of integration. Specifically, the study seeks to achieve three objectives:

- 1. Examine the settlement patterns of South Asian immigrants in the Toronto CMA: This objective focuses on understanding how South Asian immigrants have settled in the region and how their communities have evolved. By examining settlement patterns, it is possible to assess whether there is spatial integration or segregation among South Asians. Additionally, analyzing rental patterns may reveal any anomalies in areas with high South Asian populations. Insights into potential barriers to successful settlement and integration into the housing market can be gained, along with an understanding of the "invasion-succession" model, where immigrants move outward from the less expensive city center to higher-status residential zones at the urban periphery.
- 2. Analyze the evolving food landscape of the Toronto CMA in response to the increasing demand for ethnic foods: This part of the study will focus on the changing dynamics of the food retail sector in the Toronto CMA, particularly in response to the rising demand for ethnic foods. By examining the emergence of diverse food retail outlets and the factors influencing this trend, the research aims to evaluate the degree to which South Asian cuisine has integrated into Canadian culture and how the South Asian community reshapes their food environment to maintain connections with their homeland. This includes analyzing the spread of South Asian grocery stores and restaurants in the CMA.
- 3. Assess South Asian representation in Canada's political realm: The final part of the research focuses on the political participation and representation of South Asians in the CMA. This will reveal whether the host country has fostered a sense of belonging among immigrants that encourages them to engage in civic duties, become active in local politics, and contribute to decision-making processes affecting their communities. This research contributes to a better understanding of the challenges and opportunities for visible minorities in shaping the political landscape and the inclusivity of political institutions and policies.

By achieving these three objectives, this research intends to provide a deep understanding of the integration process of South Asian immigrants in Canadian society. Through this study, we can gain valuable perspectives on various social and economic issues associated with immigration. Through this case study, it is hoped that the research will answer the following pivotal questions:

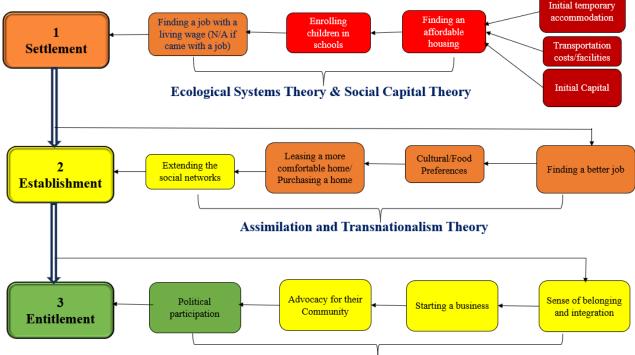

- 1. Are there any unusual patterns in rental rates within neighborhoods predominantly inhabited by immigrants?
- Is there evidence of an invasion-succession model among South Asian immigrants n the Toronto CMA?
- 3. How does the food landscape of the CMA change due to South Asian immigrants?
- 4. How do South Asian immigrants and their descendants participate in shaping the Canadian political landscape?

The findings can inform policymakers, community organizations, and stakeholders in developing strategies to address disparities, foster inclusive urban environments, and promote the successful integration of immigrants into Canadian society. Additionally, this research sheds light on potential barriers that may hinder the successful settlement and integration of newcomers in Canada.

The research paper is organized into six chapters. The first chapter provides a brief introduction that sets the research context and highlights the main research objectives and questions. Chapter 2 focuses on establishing a theoretical framework by examining the three identified phases or stages encompassing the initial process of settling in, establishing themselves and ultimately asserting their societal rights. Chapter 3 reviews the literature on the history of immigration of South Asian immigrants in the Toronto CMA. It also explores the challenges they face in settling down, in alignment with the three settlement phases. Additionally, this chapter identifies the existing research gaps in the literature. Chapter 4 describes the data sources, and the methodologies employed in this study. In Chapter 5, the analytical results are discussed and interpreted to answer the four research questions. Finally, in Chapter 6, conclusions are drawn from the various analyses presented in the preceding chapters. This final chapter also takes into consideration the research gaps identified in Chapter 3 and identifies potential areas for further study.

Chapter 2: The Theoretical Framework

Assessing the assimilation of immigrants within a country is a complex task that necessitates the examination of various dimensions of settlement. Immigrants' needs evolve from their initial arrival in the country to their later years of residency, showing a progression in their experiences. It is essential to comprehend the different stages through which immigrants blend into their adopted country. Generally, three distinct phases can be identified in the process of immigrant assimilation: the Settlement Phase, the Establishment Phase, and the Entitlement Phase. To gain a comprehensive understanding of these dynamics, it is advantageous to analyze each phase using established theoretical frameworks (See Figure 2.1). This chapter describes these different phases with reference to the relevant theories:

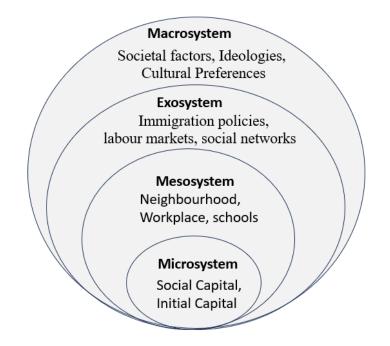

Segmented Assimilation and Transnationalism theory

Figure 2.1 Immigrants' stages of integration with relevant theories.

2.1 The Settlement Phase:

During this phase, immigrants remain newcomers, and their needs are primarily basic rather than sophisticated. Theoretical parallels can be drawn between their initial experiences in this settlement phase and the Ecological Systems Theory (Bronfenbrenner, 1979). This theory is a framework for understanding human development within the context of the systems of relationships that form one's environment. Bronfenbrenner's theory emphasizes the importance of the environment in shaping individuals over time. The theory is distinguished by its categorization of environmental influences into four nested levels of external influences, ranging from the most immediate settings of an individual's life to broad societal influences, namely, Microsystem, Mesosystem, Exosystem and Macrosystem (Ettekal & Mahoney, 2017). Using this framework, we can view the settlement process as being influenced by multiple layers of environments, ranging from the immediate microsystem to the broader macrosystem (See Figure 2.2).

Each of the four levels of external influence can be explained further in this context:

Microsystem: In this case, the immediate physical and social environments in which immigrants interact constitute the microsystem. It encompasses housing options, neighbourhood characteristics, and community resources, all of which impact their settlement decisions. For

example, if immigrants lack access to a vehicle and taxi fares are high, they may opt for public transport in their housing search. If their chosen location is well-connected to the transportation network, they might choose a residence in a distant neighbourhood. However, this dynamic could shift if they possess "Social Capital," which refers to the connections among individuals' Social networks and the norms of reciprocity and trustworthiness that arise from these connections (Putnam, 2000). Here, the "Social Capital" which centers on the resources, networks, and relationships that individuals and communities possess and utilize for social and economic advancement, becomes relevant.

Mesosystem: This level examines the interconnections between different microsystems. It considers the relationships and interactions between immigrants' immediate environments, such as the connections between their neighbourhoods, schools, workplaces, and community organizations. Families with children naturally prefer residences that are easily accessible from their designated schools. Similarly, the workplace also significantly influences their choices. In many cases, families choose residences with easy access to at least one working adult.

Exosystem: This level focuses on the broader societal structures and institutions that indirectly shape immigrant settlement patterns. It factors in elements such as immigration policies, labour markets, social services, and the availability of support networks. An illustrative example of this is the Toronto CMA, as immigrants tend to settle in economic hubs like Toronto due to its robust job market.

Macrosystem: This level analyzes the broader cultural, economic, and political contexts that mould immigrant settlement patterns. It considers the values, norms, and ideologies of the host society, as well as historical and societal factors influencing immigrant integration. Some immigrants might have cultural preferences, such as proximity to worship places. In such cases, these cultural considerations dictate their settlement choices.

2.2. The Establishment Phase:

This phase represents a transition period during which newcomers evolve into established members. This transformation can be dissected by exploring two theories: "Assimilation" and "Transnationalism." In the context of immigration, the Assimilation theory delves into how immigrants and their descendants gradually adopt the cultural norms, values, and practices of the dominant society in the host country. As time passes, they integrate into the host society by acquiring language skills, education, employment, and embracing the cultural behaviours of the dominant group. The Chicago School of Sociology, co-developed by sociologists Robert Park and Ernest Burgess in the early 20th century (<u>Park, 1928</u>), encompasses theories on immigrant assimilation. Park's work, especially the concepts of "human ecology", "Invasion succession" and the "marginal man," provides a foundation for comprehending how immigrants assimilate in urban settings.

Sociologist Robert E. Park introduced the theory of "Human Migration and the Marginal Man" in 1928, delving into immigrants' experiences and their social adaptation in urban environments. They used this ecological model to describe how different ethnic and social groups move into and out of urban neighbourhoods over time, similar to the way species in ecology invade and succeed in different environments. The assertion is that immigrants initially settle in older, less expensive housing near the city center. As their economic status improves, they move outward to higher-status residential zones, eventually reaching the urban periphery. This process, known as invasion-succession, involves one group replacing another as the latter move up economically and outward spatially (Murdie & Gosh, 2009). The idea of the "marginal man" emerged, referring to individuals straddling the boundaries of two cultures or societies. Park posited that immigrants often grapple with a sense of displacement, caught between their native culture and the host society, as they navigate the challenges of assimilation. This theory underscores the intricate psychological and social dynamics immigrants encounter while striving to establish themselves in a new society while preserving their cultural ties. Throughout this phase of establishment, immigrants who assimilate into Toronto CMA's culture, including its cuisine and people, thrive across the CMA. Conversely, cohorts who strongly cling to their native culture gravitate toward their ethnic enclaves.

Similarly, the Transnationalism theory explains that immigrants often maintain robust social networks with their fellow immigrants, both in the host country and back in their home country. These networks facilitate the exchange of information, resources, and emotional support. The theory challenges the traditional views on migration that focus on assimilation into a new society and instead highlight how migrants create and sustain social fields that link their home and host countries. The factors such as race, class, ethnicity, and nationalism intersect with migration, shaping the experiences and identities of transnational migrants (Schiller et al., 1992). This

Transnationalism is deeply intertwined with social, economic, and political forces, both influencing and being influenced by them in complex ways. Transnational communities can serve as bridges for the transmission of cultural values, traditions, and even economic opportunities across borders (Tsuda, 2012). Immigration is often driven by economic opportunities. People migrate to countries with higher demand for labour, better job prospects, and higher wages. The interconnectedness of economies can facilitate easier movement of goods, capital, and people. Also, this leads to cultural exchange and diversity, influencing the social fabric of host countries.

2.3. The Entitlement Phase:

This can be correlated with the Segmented Assimilation Theory (Zhou, 1997), which posits that immigrants and their descendants may assimilate into different segments of society, leading to varied socio-economic outcomes. Several critical factors influence the direction of assimilation. The theory identifies three distinct pathways of assimilation based on socioeconomic status, family structures, educational opportunities, neighbourhood context, and racial or ethnic identities. The interplay of these factors can determine whether an immigrant family's assimilation trajectory is upward (towards greater socio-economic integration), downward (towards socio-economic decline and marginalization), or selective (adopting aspects of the host culture while retaining key elements of the native culture). This concept, when combined with Esser's (2010) comprehensive model of intergenerational integration, where he reconstructed the 'Theory of Segmented Assimilation', can be referenced in the third stage of assimilation: 'Entitlement.' While some immigrants actively engage in mainstream political processes, others prioritize issues pertinent to their ethnic community. Utilizing this theory, we can assert that immigrant political engagement is shaped by a complex interplay of cultural, social, and economic factors, resulting in diverse manifestations of political involvement within immigrant populations. We can distinguish three pathways that immigrants may follow:

Mainstream Assimilation: Immigrants who take the mainstream assimilation pathway aim to adopt the norms, values, and practices of the dominant culture. They actively partake in mainstream political processes, address broader societal matters, and strive to integrate into established political institutions. Their political engagement aligns with dominant political ideologies and practices.

Ethnic Assimilation: Immigrants following the ethnic assimilation pathway maintain a strong connection to their ethnic identity and community while concurrently participating in the larger society. Their political involvement often centers on issues pertinent to their ethnic group or community, and they may engage in advocacy and activism related to these concerns. This form of engagement can manifest through participation in ethnicity-specific political organizations or the championing of policies that benefit their ethnic group.

Selective Acculturation: Immigrants adopting the selective acculturation pathway navigate a middle ground between mainstream and ethnic assimilation. They may adopt specific elements of the dominant culture while retaining ties to their ethnic identity. Their political engagement is diverse and flexible, reflecting a blend of involvement in both mainstream and ethnic-focused political activities.

Transnational immigrants may advocate for policies and initiatives that affect their home country, such as those related to trade, development, or human rights. They may also advocate for policies in their host countries that directly impact immigrants, including immigration reform, anti-discrimination laws, or access to social services. These Transnational immigrants may be involved in homeland politics across borders alongside political engagement in the host society. (Tsuda 2012).

The study of immigrant assimilation within a cohort in a certain location cannot be fully understood or explained through a single theoretical framework due to the complex and multifaceted nature of human societies. By drawing on multiple theories, this comprehensive approach enables a deeper understanding, which in turn allows for the identification of more effective policies and practices to support immigrant assimilation.

Chapter 3: The History of South Asian Immigration to Canada and Settlement Challenges – a Literature Review

South Asians have made notable progress in their presence and influence in Canada, particularly in the Toronto CMA, in recent decades. They originated mainly from India, Pakistan, Bangladesh, Sri Lanka, Nepal, Bhutan, and Maldives (Figure 3.1). Their immigration to Canada began in the 19th century but has accelerated in recent years (Government of Canada, 2023).

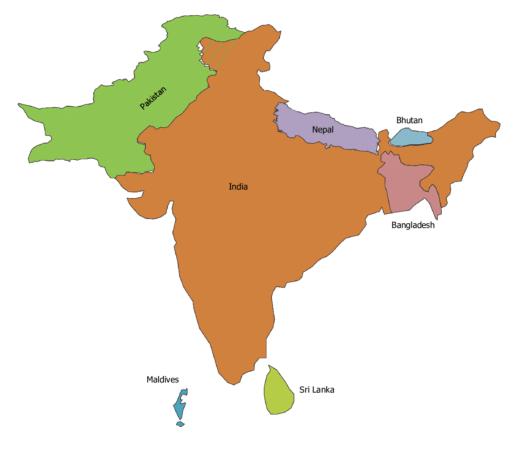

Figure 3.1 South Asian countries

3.1 First South Asian Immigrants

South Asians began to immigrate to Canada in the 19th century. The early arrivals were primarily concentrated in British Columbia (Government of Canada, 2023). Punjab Indians were the first individuals of South Asian origin to arrive in Canada in the province of British Columbia as soldiers during Queen Victoria's Diamond Jubilee celebration in 1897 (South Asian Studies Institute, 2018 - 2021). Following the festivities, troops from Hong Kong and the Malay States

visited British Columbia on their way back from London via Atlantic Canada. These troops shared stories about the new immigrants and British subjects settling in British Columbia, which triggered the South Asian migration to Canada. Around 30 men arrived in Vancouver and Victoria between 1903 and 1904 as immigrants to Canada, with most of them being Sikhs from Hong Kong or other British Far Eastern strongholds. They worked in lumber, mining, and railways and later became involved in agriculture. By the early 1900s, these new and growing communities faced racial hostility and resentment akin to the attitudes directed toward other minority communities. During that time, the Government began taking actions to limit the rights and benefits of minority communities in Canada. Until the late 1950s, virtually all South Asians in Canada lived in British Columbia; but when professional South Asian immigrants came to Canada in larger numbers, they began to settle across the country (Buchignani, 2010).

3.2 Restrictions on immigration

Like any other immigrants, the South Asian community encountered their share of antiimmigrant sentiment and racial bias. One notable example of such policies was the "Continuous Journey Regulation," introduced in 1908 (Government of British Columbia, 2017). This regulation was tailored to prevent South Asian immigrants, particularly Indians, from entering Canada. It mandated that immigrants must travel to Canada in a continuous journey from their country of origin, without stopping in any other nation along the way. This policy primarily aimed to thwart South Asian immigration, given the absence of direct passenger routes from India to Canada. Consequently, most South Asians were effectively barred from entering Canada, exemplified by the Komagata Maru incident of 1914 (Johnston, 2014). The Komagata Maru's journey not only exemplifies the era of Anti-Asian Xenophobia and racial exclusion in Canada, but it also marks an instance where the nation's desire for the "White Country" was directly confronted (Mongia, 2003).

In 1923, Canada introduced a quota system aiming to limit immigrants from specific countries, including those in South Asia. Quotas were determined based on the percentage of each ethnic group within Canada's population. This system heavily curtailed immigration from non-European nations, including India and other South Asian countries. Canada signed agreements with the governments of India, Pakistan, and Ceylon (now Sri Lanka), restricting the annual admission to 300, 100, and 50 individuals from these countries, respectively. (Rawlyk, 1962).

The continuous journey regulation remained in effect until 1947, when it was finally repealed, largely due to post-World War II labour demands and shifting attitudes toward immigration. Following its repeal, South Asian immigration to Canada gradually increased. Later, in 1967, Canada abolished the immigration quotas based on specific ethnic groups, leading to the rapid growth of the South Asian population in the country (<u>Buchignani et al, 1985</u>).

3.3 Major South Asian ethnic groups in Toronto CMA

As per Statistics Canada's 2021 population census, 59 percent of South Asian immigrants in the Toronto CMA originate from India, with Pakistan accounting for another 19 percent and Sri Lanka for 15 percent. Bangladesh contributes 6 percent of South Asian immigrants, while Nepal and Bhutan contribute only 1 percent (see Table 3.1). The data show that before 1981, South Asian immigration was relatively low. However, between 1991 and 2000, there was a notable increase in South Asian immigration, attributed to the removal of racial and national restrictions from immigration regulations. This led to a shift in the settlement pattern of Indians from British Columbia to Ontario, which also became more culturally diverse. Subsequently, the immigration rate decreased gradually from 2000 to 2015. However, after the introduction of the Express Entry system for immigration in 2015, there has been another noticeable uptick in South Asian immigration between 2015 and 2021.

| Period of Immigration | India | Pakistan | Sri Lanka | Bangladesh | Nepal | Bhutan |
|-------------------------------|--------|----------|-----------|------------|-------|--------|
| Recent Immigrants (2016-2021) | 104245 | 18110 | 4935 | 6035 | 1970 | 25 |
| 2011 - 2015 | 54765 | 20095 | 7255 | 6140 | 2535 | 35 |
| 2006 - 2010 | 53125 | 18625 | 13165 | 7665 | 1660 | 60 |

| Total | 394615 | 128305 | 99290 | 36750 | 7555 | 140 |
| Percentage in Grand Total | 59% | 19% | 15% | 6% | 1% | 0% |

Table 3.1 Country-wise breakdown of South Asian Immigrants during different periods.

Source: Statistics Canada, 2021 Census of Population

Note: The South Asian population tabulated here represents the mentioned countries. These counts refer to immigrants by place of birth and do not include the Canadian-born population of South Asian ancestry. The total South Asian population in the CMA mentioned in Chapter 1 is taken from the Toronto CMA Census Profile from the 2021 Census of Population.

The Punjabi-speaking Indians, Tamil-speaking Sri Lankans, Urdu-speaking Pakistanis, and Bengali-speaking Bangladeshis were the predominant South Asian groups who entered Toronto CMA in the early stages of immigration. The subsequent sections provide an overview of how the four major South Asian ethno-linguistic groups established their societies within the CMA.

Punjab Indians

In the Toronto CMA, there is a significant Punjabi diaspora, with many settling in Mississauga and Brampton. The arrival of Punjabis in Ontario started in the late 1940s when they were granted the right to citizenship. In the formation of ethnic communities in Toronto, religion seems to be a significant binding force in many communities, especially for those of the Jewish, Muslim, Sikh, or Orthodox Christian faiths (<u>Qadeer, 2003</u>). Jimmy Gill was the first Indian to come to Toronto from British Columbia in 1946, and he was the brain behind the first ever Sikh-Gurudwara (A Gurdwara, in Punjabi, meaning "the doorway to the Guru," is the Sikh place of worship) to come up on Pape Avenue in Toronto in 1969. As the Indian community quickly grew in numbers in the 1970s and started spreading to the west side, new Gurudwaras came up in Mississauga and Brampton (<u>Chaggar, 2022</u>). Sikh enclaves can be found in Malton, near the airport, and in Brampton, on the northwestern periphery of the CMA (<u>Qadeer, 2003</u>). Now, Brampton is like a "Mini Punjab" with 17.6% of its population with Punjabi as their mother tongue. Punjabi is the leading non-official language spoken at work in the city of Brampton, followed by Hindi and Spanish (<u>City of Brampton GeoHub, 2024</u>)

More than half of all truckers in the Toronto area were born in South Asia (*Toronto Star*, October 18, 2018). Among Canada's truck drivers, one-third are immigrants, with the majority being of Indian origin, accounting for over 40 percent, and most of these drivers speak Punjabi. In Canada, many truck drivers have become independent contractors, owning their tractors, and operating as small businesses. Furthermore, Punjabi Canadians have become prominent players across the trucking industry, not just as drivers but also in various supporting roles such as repair shops, car washes, insurance companies, suppliers, dispatch units, and diners.

Sri Lankan Tamils

Sri Lankan migration to Canada began in the early 1960s, initially involving Burghers, a mixed-race group that met immigration criteria. Additionally, English-educated Sri Lankans relocated to the UK, Australia, and Canada due to the declaration of Sinhala as the sole official

language in 1956 (Abrahams, 1990). Before Canada adopted non-racial immigration selection in 1967, approximately 500 Ceylonese immigrants had arrived. By 1973, about 1,747 Sri Lankans had settled in Canada. These immigrants, proficient in English and with strong educational and professional backgrounds, did not face significant insecurities and did not cluster together (Sugunasiri, 1984).

A significant turning point occurred in July 1983 when communal unrest in Sri Lanka led to the admission of 4,373 Sri Lankans into Canada, approximately 30 percent of whom were Tamils. Amid the July 1983 riots in Colombo, Immigration Minister John Roberts implemented relief measures. By September 1983, a program was introduced allowing Sri Lankan refugees, students, and visitors in Canada to apply for residency. This program temporarily halted deportations, eased criteria for sponsoring family members, and issued permits to those in danger. The program resulted from strong advocacy by Toronto's Tamil community, supported by church groups and coordinated by the Tamil Eelam Society of Canada (Aruliah, 1993).

Most Sri Lankan Tamils who arrived in the 1980s were refugees, having been displaced by the civil war in their homeland. They sought immigration to gain an education and rebuild their lives. As Israel (1994) noted, "Most Sri Lankan Tamils in Toronto are young, poor, and without advanced education." During the mid to late 1980s, many Tamils from Sri Lanka sought and were granted asylum in Canada, forming the foundation of the current diaspora (Hyndman et al., 2022). The new Tamil immigrants, mostly from the Jaffna peninsula, sought to preserve their culture, language, and identity, which had been deeply impacted by the Sri Lankan civil war. This led to the establishment of several Tamil-only organizations in Toronto, as they felt disconnected from true Tamil culture. After 1983, the Wellesley-Parliament area in downtown Toronto, known as Cabbage Town, became the focal point for Tamil-speaking Sri Lankans. In the early 1990s, Metropolitan Toronto witnessed the rapid emergence of Sri Lankan food catering services that operated from private homes (Chandrasckar, 2008).

During the 1980s and 1990s, many Tamils immigrated to Canada and settled in major cities such as Toronto and Montreal (<u>Amarasingam, 2013</u>). Between 2006 and 2016, the Sri Lankan immigrant population in the Toronto CMA grew by 32%. In 2016, nearly 48% of Sri Lankan Tamils living in the CMA resided in Toronto, particularly in Scarborough. However, many have since

moved to the suburbs in search of larger homes and closer proximity to Tamil cultural institutions. Their spatial distribution has expanded from the central city to suburban areas like Markham, Vaughan, Brampton, and Mississauga, driven by the availability of larger homes to accommodate extended families and the proximity to Tamil cultural institutions (Zarook, 2019).

Religion played a crucial role in developing a particular identity among Sri Lankan immigrants to Ontario. The community established numerous Hindu temples to meet their religious needs. Sri Lankan Tamils are often identified as wartime refugees, which has led to elevated high school dropout rates and residence in lower-income neighbourhoods in (the former cities of) Toronto and Scarborough. Despite their lower socioeconomic status, many Sri Lankan Tamils achieved success, transitioning from unskilled shift jobs to stable 9-to-5 positions and investing significantly in their children's education. (Thiranagama, 2014).

Pakistanis

The history of Pakistani immigration to Canada can be traced back to the period of Punjabi migration to British Columbia. Before 1947, Pakistan was a part of British India. At that time, the borders between India and Pakistan were defined by Sir Cyril Radcliffe, a British civil servant, leading to a division of the subcontinent based on regions with a Hindu majority in the central and southern areas and predominantly Muslim populations in the north-west and north-east (Chatterji, 1999). Since Pakistan's independence, instability in economics, society, and politics prompted many, including professionals, to leave the region in search of better prospects. During the 1950s and 1960s, Britain was a favoured destination for Pakistani migrants due to relaxed Commonwealth member entry. However, economic struggles, anti-immigrant sentiments, and racial tensions in Britain led to Pakistanis seeking other options like Canada. Optimism arose due to liberal policies, colonial ties, and Commonwealth membership. The first notable Pakistani influx in Canada, mostly educated professionals, occurred in the 1960s. Organizations like the Ontario Association of Pakistani Canadians fostered the local community. By the 1970s, Gerrard Street started to take shape as a dynamic and vibrant South Asian focal point, including Pakistanis. From 1980 to 2002, over 100,000 Pakistanis arrived in Canada, mainly in Ontario, particularly in Toronto (Khan, 2012).

By the 1970s, the growing Pakistani community started to have an influence on Gerrard St. East (popularly called "Little India"), particularly around the Al Markaz Mosque. The Gerrard

India Bazaar, now established, was centred around the former Eastwood Cinema. Initially built in 1929, the cinema initially served the English, Irish, and Scottish immigrants who settled in the area before World War I. In 1966, the cinema closed and was later rented by Gian Naz, an immigrant from India, in 1972. The Naaz Theatre became a significant attraction for migrants from India and Pakistan, leading to the opening of new businesses and restaurants in the vicinity (Heritage Toronto, 2019)

A notable restaurant on Gerrard Street East is Lahore Tikka House, founded by Alnoor Sayani, who arrived in Toronto via Uganda and England. This immigration story resonates with many in the community. In 1972, Ugandan leader Idi Amin expelled around 80,000 individuals of South Asian descent from the country. About 6,000 of those who left Uganda settled in Canada (<u>CBC News, 2022</u>). This restaurant played a pivotal role in fostering Pakistani culture in Toronto. It is believed the Aga Khan, the spiritual leader of the world's 15 million Ismaili Muslims, contacted his friend, then-prime minister Pierre Trudeau, and negotiated Canada's acceptance of thousands of Ismailis fleeing persecution in East Africa in the early 1970s (<u>Muhammedi, 2017</u>).

In 1984, the Islamic Foundation acquired a 2.3-acre plot at the intersection of Markham Road and Nugget Avenue in Scarborough, establishing the first multipurpose mosque in Canada, replacing its previous location on Rhodes Avenue. Urdu-speaking Muslims and other Muslim newcomers to Toronto began to settle in northeast Scarborough to be in proximity to the mosque as well as friends and family in the region (<u>Heritage Toronto, 2019</u>).

Bangladesh Bengalis

The partition of India in 1947 resulted in the creation of West and East Pakistan, two noncontiguous territories sharing Islam as the dominant religion but differing significantly in language, ethnicity, and culture. In the 1970 parliamentary elections, a vast majority of East Pakistanis voted for a political party advocating autonomy for the East. However, this party was prevented from assuming governance by the army and the existing Pakistani government, leading to the imprisonment of its leader. The resultant mass protests in the East were brutally suppressed by the Pakistani army, triggering a massive refugee movement into neighbouring India. Supported by India, East Pakistani guerrilla forces engaged in conflict with the Pakistani Army in the late autumn of 1971. On December 17, 1971, East Pakistan finally achieved freedom, leading to the establishment of the newly independent state of Bangladesh, governed by a constitution distinct from that of Pakistan (<u>Hajjaj</u>, 2022).

Canada stood among the first nations to recognize the newly independent Bangladesh in 1972, less than a year after its liberation from Pakistan. In 1973, the Bangladesh High Commission in Canada was established in Ottawa. Consequently, skilled workers from Bangladesh began migrating to Canada (Ray, 2019). The migration of Bangladeshis to Canada can be understood through the lens of global capitalism, where skilled labour from less developed countries moves to more developed ones in pursuit of higher wages due to the circulation of capital from developed countries. In the 1960s, the demand for skilled labour in Canada led to changes in the discriminatory Immigration Policy (Ahmed, 2020). Additionally, political instability and economic challenges in Bangladesh prompted immigration to Canada during the 1970s and 1980s. Presently, around 100,000 people of Bangladeshi origin reside in Canada. The initial wave of immigration from Bangladesh to Canada consisted of professionals in the 1960s, some of whom arrived for higher education and professional training before becoming permanent residents. Immigration escalated over the following decades, peaking in the late 1980s. Bangladeshi immigration to Canada occurs under two main categories: skilled workers and family reunification. Concentrations of Bangladeshi-origin individuals are primarily found in the provinces of Ontario, British Columbia, Quebec, Saskatchewan, and Alberta, particularly in major cities such as Toronto, Montreal, Vancouver, Calgary, Edmonton, Regina, and Ottawa. A substantial cluster of Bangladeshis resides in the eastern part of Toronto, near Scarborough, particularly around Victoria Avenue and Danforth. The community actively ensures its welfare through various associations (High Commission for the People's Republic of Bangladesh, Ottawa, Canada, 2024).

Toronto is home to three distinct Bangladeshi communities. The most well-known is in the Crescent Town neighbourhood in East Toronto, often referred to by Bangladeshis as "Bangla Town." There are also concentrations of Bangladeshis in the Regent Park area downtown and a smaller group in the Cabbage Town neighbourhood to the west (<u>Halder, 2012</u>). After moving to Canada, Bangladeshi immigrants, especially those from the Muslim community, struggled to enter the job market.

In Crescent Town's Bangla Town, many Bangladeshis live in older high-rise apartment buildings. They are drawn to these buildings for various reasons, including affordable rents, larger units that accommodate big families and extended family living, and the close proximity to other Bangladeshis and community organizations that cater to their needs (<u>Murdie and Ghosh, 2009</u>).

For many Bangladeshis, living close to others from their community provides a sense of comfort and familiarity in a new country. They have actively transformed these spaces to meet their social, religious, and economic needs (<u>Ghosh, 2014</u>). While traditionally seen as homemakers with their husbands as the primary breadwinners, many Bangladeshi women have started their own businesses, such as restaurants, clothing stores, and beauty salons, to support their families (<u>Akbar 2023</u>).

3.4 Shift in immigration composition

While a large proportion of immigrants in the 1950s were Sikh relatives of pioneer South Asian settlers, the 1960s witnessed substantial increases in immigration from other parts of India and Pakistan. By the early 1960s, two-thirds of South Asian immigrant men held professional positions such as teachers, doctors, university professors, and scientists (Buchignani, 2010)

The Canadian preference for highly skilled immigrants during the 1960s broadened the ethnic diversity of South Asian immigrants and consequently reduced the proportion of Sikhs (Buchignani et al., 1985). In 1972, all South Asians were expelled from Uganda, with Canada accepting 7,000 of them, many of whom were Ismailis, as political refugees. This marked the start of a steady flow of South Asians to Canada from such African countries as Kenya, Tanzania, and the Democratic Republic of Congo, either directly or via Britain. The 1970s also saw the initiation of migration from Fiji, Guyana, Trinidad and Tobago, and Mauritius. By the 1980s, Ontario emerged as a prime immigration destination, with many Asians settling in the Greater Toronto Area, including Scarborough, Markham, Mississauga, Brampton, and Ajax (Buchignani, 2010).

According to recent statistics, most South Asian immigrants from India entered the country through the Canadian experience class under the Economic class, indicating that they had prior work experience in Canada before becoming permanent residents (<u>Statistics Canada, 2022a</u>). In general, immigrants move into Canada through one of four pathways: economic, family sponsorship, refugee, and other immigrants. Most Sri Lankan immigrants made the entries under the Refugee group. Business-class immigrants are mainly from India and Pakistan (investing at

least \$75,000 in a new start-up business or investing in one). Indian immigrants make up 64 percent of the family sponsorship category. (See Figure 3.2)

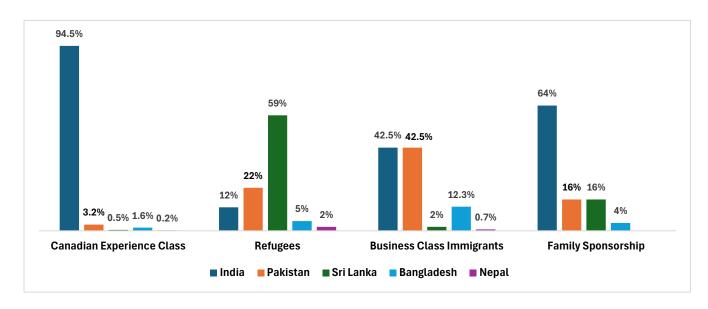

Figure 3.2 The percentage of South Asian immigrants in the Toronto CMA (2021 Census) by Admission category.

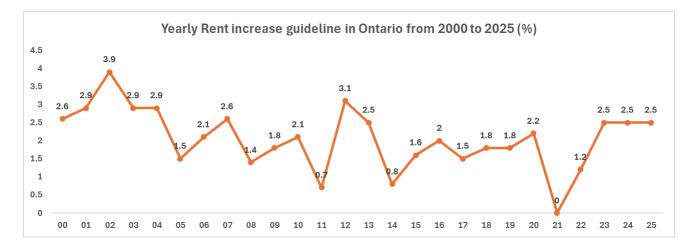

In recent years, there has been a decline in the number of immigrants from Sri Lanka and Pakistan. The immigration rates from Nepal and Bangladesh have remained relatively steady and limited. Significantly, the proportion of Indian immigrants has increased twofold since 2016, in contrast to a decline in immigration from other South Asian nations (See Table 3.1). Since the number of immigrants from Nepal and Bhutan is very low in comparison to the other countries, they have been excluded from the subsequent analysis.

3.5 The Journey of Settlement

Immigrants in the process of settling in a foreign country must establish a new foundation for themselves. While the financial resources they bring from their home country provide some initial assistance, finding employment becomes a crucial step in fulfilling their fundamental needs. Furthermore, given the ongoing challenges in finding affordable rental housing within the Toronto CMA, they also need to secure suitable living arrangements that meet their requirements. As described in Chapter 2, this transition occurs gradually. Initially, there is a period of adjustment during which they establish themselves in the new country, as explained in the *Settlement* phase. Gradually, they integrate into society, as described in the *Establishment* phase, and become advocates for their community, which we call the final stage of integration: the *Entitlement* phase. The following section explores the broad topics in which South Asian immigrants influence and impact the social, economic, and political landscape of the CMA.

3.5.1. Rental crisis

The vacancy rate in the rental market dropped to a record low of 1.2% in 2023 (<u>CMHC</u> <u>2024a</u>), making it very competitive for renters. The Bank of Canada's large interest rate hikes and the end of the rent freeze in 2021 have impacted rental prices in the CMA (<u>CMHC</u>, <u>2024b</u>). New immigrants are key in driving housing demand, and their choices about where and what type of housing to rent can greatly affect the local housing market.

Research by Ley and Tutchener (2001) shows that immigration has a significant impact on housing prices in Canada's cities, especially in Vancouver and Toronto, which saw much higher price increases than other cities after 1985 due to immigration. Another important report by <u>Hiebert</u> (2006), published by the Canada Mortgage and Housing Corporation, discusses the housing conditions and needs of new immigrants in Montréal, Toronto, and Vancouver, focusing on their first months in Canada. Enclaves like Brampton are popular among the Indian immigrants. Brampton had the highest year-over-year rent increase in the country, according to Rentals.ca. In August 2023, rent for a one-bedroom apartment was up by 29 percent compared to the previous year, and up by 25.7 percent for a two-bedroom apartment. Elsewhere in the CMA, places like

Toronto, Mississauga, and Scarborough saw rent increases ranging from 10 to 15 percent. The chief market analyst with the Toronto Regional Real Estate Board, Jason Mercer says that the competition between renters pushing up average rents, and on the other side property owners who are facing increased costs are looking to recoup at least some of those through higher rents. This surge is driven by population growth, especially from new immigrants, making it difficult for renters like international students to afford housing (<u>CBC News, September 19, 2023</u>).

Most studies examining the impact of immigration on the housing market in the CMA were conducted before the onset of mass South Asian immigration, which began in 2015 after the onset of <u>the Express Entry Program</u>. There is a clear gap in the literature on this topic, particularly where South Asians represent the majority of recent immigrants. It is worth studying the impact of South Asian immigration on the CMA's rental market. After identifying South Asian hotspots in the CMA, Chapter 5 examines rental patterns and historical trends in these areas to understand the rental crisis through the lens of South Asians.

3.5.2. The Impact on Toronto's Food Retail Landscape

South Asian immigrants significantly contribute to the diverse food landscape within the CMA. Although supermarket chains such as Loblaws and Sobeys dominate the market, there is a growing trend towards the popularity of ethnic grocery stores and online shopping platforms. Chapter 5 presents a mapping of South Asian ethnic food retail outlets, including grocery stores and restaurants, in relation to settlement patterns, along with an analysis of their correlation. The location and high concentration of these ethnic businesses within the CMA may reflect the pathways immigrants follow in their integration process, as discussed in Chapter 2. The presence of these outlets, along with settlement hotspots, suggests a strong connection between immigrants' maintenance of their ethnic identity and their selective adoption of the host country's food practices. This cultural retention may influence the food landscape by encouraging the establishment of more ethnic grocery stores and restaurants in the CMA as the demand for ethnic food among these immigrant communities rises.

A notable study in this context is <u>Perry et al. (2020)</u>, which examined the changing spatial structure of ethnic grocery retailing in Toronto, focusing on Chinese and South Asian communities. This study analyzed the distribution of grocery stores and ethnic residential patterns between 2001 and 2016, revealing disparities in access to both mainstream and ethnic retailers.

The findings highlighted a growing suburbanization of these communities, with some areas being underserved by both mainstream and ethnic stores, while others heavily rely on ethnic grocers to fill market gaps. The current study explores whether these ethnic stores are filling the gaps, or they are the preferred ones in these suburbanized communities. By examining the spatial distribution of these businesses and their proximity to South Asian communities, the study highlights the role of food practices in maintaining cultural identity while navigating the complexities of integration.

3.5.3. Political Involvement

As mentioned in Chapter 1, political participation represents the final stage of immigrants' integration into the host society. Notably, the South Asian community has encountered antiimmigrant sentiments and racial bias. In 1967, Canada's elimination of immigration quotas linked to specific ethnic groups led to a rapid increase in the South Asian population within the country. Subsequently, in 1971, multiculturalism was officially embraced as a policy by the Canadian government and further reinforced by Section 27 of the Charter of Rights and Freedoms. This section mandates the interpretation of the Charter in ways that promote the preservation and enrichment of Canadians' multicultural heritage (Wayland, 1997)

In 1988, the *Canadian Multiculturalism Act* was enacted, solidifying this policy into law as a commitment by the federal government to nurture and sustain a diverse, multicultural society. This legislation gave rise to the Department of Multiculturalism and Citizenship, now known as the Ministry of Canadian Heritage. This entity provided increased opportunities for political involvement among immigrants and ethnic minorities residing in Canada (<u>Wang, 2022</u>).

Several political, social, and religious organizations thrive within the South Asian communities. For instance, non-profit organisations like the Canadian Tamil Congress, which operates among Tamils, serves as a community and advocacy group, representing specific Tamil Canadians at municipal, provincial, federal, and international levels. A recent study by <u>Wang (2022)</u> has discovered that South Asian and Chinese populations have reached critical mass in certain electoral districts. This phenomenon has led to heightened political participation and engagement. It has also attracted the attention of political parties that view these areas as significant sources of political capital.

An analysis of the list of South Asian candidates participating in federal, provincial, and municipal elections in the Toronto CMA will be undertaken to assess the political integration of South Asians. This analysis is expected to yield insights into the representation and participation of these communities and the inclusion of visible minorities in Canadian politics in general.

In essence, these factors are crucial in assessing the integration of immigrants, and there is a clear knowledge gap in the existing literature. Many studies are focused either on one ethnic group or were conducted before the onset of recent mass immigration. This study aims to fill this gap by exploring the identified topics in the context of the three stated research objectives.

Chapter 4: Data and Methodology

4.1 Data Sources

This study achieves its research objectives primarily through the utilization of the 2021 Census of Population data disseminated by Statistics Canada (accessed via CHASS -- an online database maintained by the University of Toronto Library). To conduct a temporal analysis and identify trends in the settlement locations of South Asian immigrants within the Toronto CMA, data from previous censuses spanning from 1981 to 2021 were also employed. Before the 1996 Statistics Canada Census of Population, the count of the Asian population was generalized without any subcategories. Later, from 1996 onward, immigrants from India, Pakistan, and Sri Lanka began to be listed separately. In the 2001 Census, a subcategory for Bangladeshi immigrants was introduced. In the later year censuses, detailed language and subcategories were introduced.

Initially, the average expenditure on rent variable from the Census of Population 2021 was used to analyze rents. However, these rates were significantly below the current market rates. Hence average rent data from the Toronto Real Estate Board's (<u>TREB</u>) quarterly rental reports for the past ten years from 2014 to 2024 are used. In the absence of direct data sources for analyzing the South Asian food retail industry and mapping South Asian restaurants and grocery stores, information was gathered through web scraping from OpenStreetMap and Google Maps.

To assess the political involvement the candidate list of the 2021 Federal and 2022 Provincial and Municipal election candidate list were used. The ethnicity of the South Asian candidates is identified by their country of origin using the common family names, through internet research and personal knowledge.

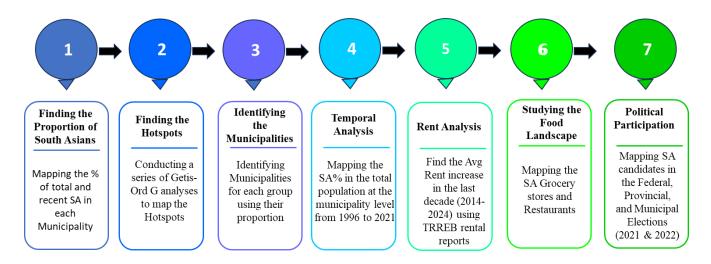

The data sources utilized for addressing the three stated objectives are summarized in Table 4.1.

4.2 Methodology

The study deployed quantitative methods to fulfill its three stated objectives. Analysis of the specified topics is carried out systematically in seven steps, utilizing the results of each step for the subsequent analysis as illustrated below:

Step 1: Finding the proportion of South Asians in each municipality

Mapping the percentage of total and recent (2016–2021) South Asian immigrants relative to the total population in each of the 24 municipalities in the CMA.

Step 2: Finding the Hotspots

Conducting a series of spatial analyses for the four major South Asian ethnic groups using the Getis-Ord Gi* statistic to determine if there is any clustering in the settlement pattern of South Asians and mapping the same.

Step 3: Identifying the Municipalities

Based on the hotspot locations identified in Step 2, the municipalities popular among each of the four groups (namely India, Pakistan, Sri Lanka, and Bangladesh) are tabulated using their proportion in the identified spots compared to the entire municipality.

Step 4: Conducting a temporal analysis to identify the settlement trends

The expansion of South Asian immigrants over the past 25 years (1996–2021) will be studied by mapping their percentage in the total population at the municipality level to identify the settlement trend.

Step 5: Rent Analysis

Finding the increase in the average rent of bachelor, one-bedroom, and two-bedroom apartments in the last decade (2014–2024) for the hotspots identified in Step 2 using the Toronto Regional

Real Estate Board (TRREB) First Quarter Rental reports and correlating it with the settlement trends identified in Step 4.

Step 6: Studying the Food Landscape

Mapping the locations of four major South Asian ethnic food retail areas, including grocery stores and restaurants, identifying the correlations between immigrant settlement locations and business distributions, and studying how the CMA's food retail landscape is changing in response to South Asian immigration.

Step 7: Analyzing the participation of South Asian candidates in the Province's Political realm

Mapping the location of South Asian candidates from the Toronto CMA who ran or were selected in the 2021 and 2022 Federal, Provincial, and Municipal Elections and analyzing their level of integration and the correlation between the participated ridings/municipalities and the identified hotspot locations.

Chapter 5: Data Analysis and Interpretation

5.1 Settlement Patterns of South Asian Immigrants in the Toronto CMA

To identify the settlement patterns of South Asians, the percentage of South Asian immigrants relative to the total population in 2021 is mapped in each of the 24 municipalities in the CMA (see Figure 5.1. Brampton (28.9%), Milton (15.5%), Mississauga (13.8%), Ajax (13.0%), and Caledon (10.6%) are the top five municipalities.

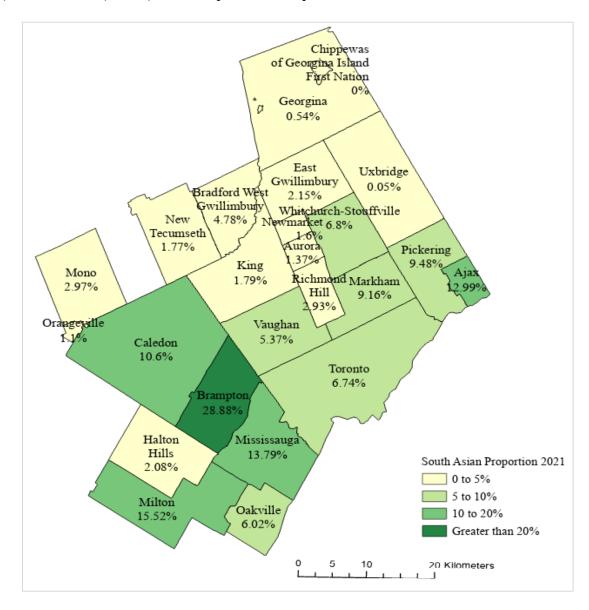

Figure 5.1 Percentage of South Asian immigrants in the total population in 2021.

In general, South Asian immigrants tend to settle in the southern regions of the CMA. Although they are widespread in Toronto, their proportion is relatively low (6.74%) compared to the city's vast population. However, out of the 100,000 recent South Asian immigrants (2016-2021), 39% settled in the City of Toronto which includes the inner suburbs like Scarborough, North York, East York and Etobicoke, followed by Brampton (32%) and Mississauga (16%) (See Figure 5.2).

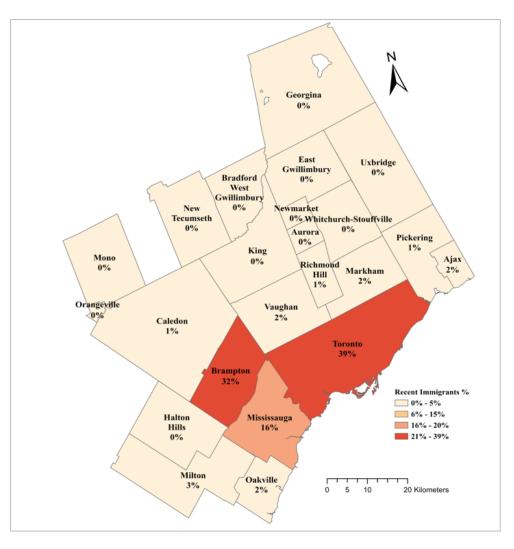

Figure 5.2 The proportion of recent South Asian immigrants (2016 to 2021) at the municipality level in the Toronto CMA

Settlement Trend

Initially, South Asians began settling in the Brampton and Mississauga municipalities in the mid-90s. Later, their settlement pattern spread across the CMA. To analyze this trend, a temporal analysis was conducted using Census of Population data on South Asian immigrants over the past 25 years (see Table 5.6). This temporal data, mapped in Figure 5.8, reflects the expansion

of the South Asian community, which began in Brampton and Mississauga in 1996 and extended towards Ajax and Pickering in the eastern end by 2021.

In recent years, after 2016, we can observe a decline in the South Asian population in Toronto and Mississauga. At the same time, Caledon, the northernmost municipality of the Peel Region, experienced a 100% increase, from 5.23% to 10.6%. Similarly, Milton, Ajax, and Pickering are becoming popular places for South Asians to settle. This is a testament to the invasion-succession model. In Park's traditional model of change, where each preceding immigrant wave moves outward and is succeeded by more recent, poorer immigrants, a similar pattern can be observed in a modified manner within the context of an urbanized CMA like Toronto. South Asians who initially settled in the city center, upon improving their economic status and establishing themselves in the host country, move outward by either buying houses or moving into more comfortable housing in regional municipalities like Caledon. Meanwhile, recent immigrants who are in their initial settling phase are living in city centers for better prospects and opportunities.

Table 5.1 Percentage of Immigrants from Four Major South Asian Ethnic Groups in the Total Population of Toronto CMAMunicipalities, 1996-2021.

Figure 5.3 Percentage of South Asian Immigrants in the Total Population of Toronto CMA (1996-2021)

Hotspot Analysis

To determine if there is any clustering in the settlement pattern of South Asians in the CMA, a series of spatial analyses using the Getis-Ord Gi* statistic is conducted at the Dissemination Area (DA) level of geography. This tool examines each feature, in this case, each DA, within the context of neighbouring features. A DA with a higher percentage of South Asians is noteworthy but may not be a statistically significant hot spot. To be a statistically significant hot spot, a DA must have a higher concentration of South Asians in the surrounding DAs as well (Arc GIS Pro 3.3, Tool Reference guide). By running this analysis, we can pinpoint areas with statistically significant concentrations, termed 'hot spots' for high values, and 'cold spots' for low values, where South Asian immigrants from the four major ethnic groups are settling in each municipality.

A series of four analyses are conducted, each using a standardized place of birth count variable from the 2021 Canadian Census as the input feature for the four major South Asian groups, namely Indian, Pakistani, Sri Lankan, and Bangladeshi. The analytical processes generate an Output Feature Class containing essential statistical measures for each DA for the total 7,716 DAs in the CMA, including z-scores, p-values, and a categorization field labelled 'Gi Bin.' The 'Gi Bin' field categorizes each DA into bins representing different levels of statistical significance based on the confidence level: +/-3 bins indicate a 99% confidence level, +/-2 bins show a 95% confidence level, and +/-1 bins denote a 90% confidence level. Features categorized within the 0 bin do not display statistically significant clustering. Essentially, higher absolute values of z-scores and smaller p-values indicate stronger clustering of settlement values-positive for hot spots and negative for cold spots. To visually represent these findings, only the hotspots with 90%, 95%, and 99% confidence levels (Gi Bin: +1, +2, +3) are considered, and the negative (cold spots) and '0' values are excluded from all four analyses (refer to Figure 5.3). Overall, out of a total of 7,716 DAs in the Toronto CMA, 1,375 are statistically South Asian hotspots, with 597 Indian, 279 Pakistani, 276 Bangladeshi, and 253 Sri Lankan immigrant-predominant DAs. Among these, 30 DAs are shared by the four ethnic groups.

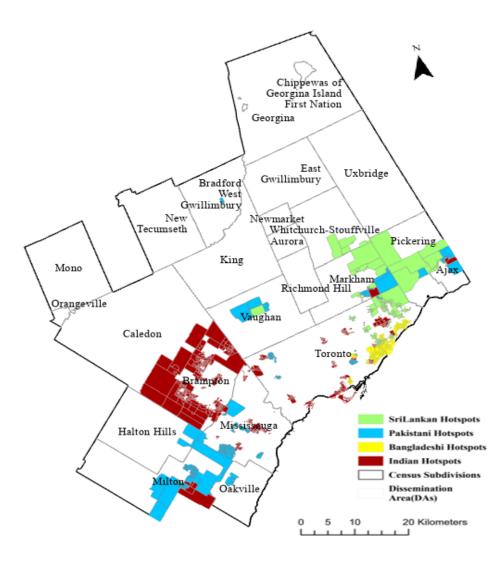

Figure 5.4 Hotspot Settlement Locations of South Asian Immigrants

Indian Hotspots

Indian immigrants are widespread in the CMA. However, Brampton is a major hotspot for Indian immigrants. In the City of Toronto, they are scattered throughout without forming specific enclaves. Additionally, there are hotspots in the southwest end of the CMA, particularly in the Milton municipality, and in the southeast end, in the Ajax municipality (refer to Figure 5.4).

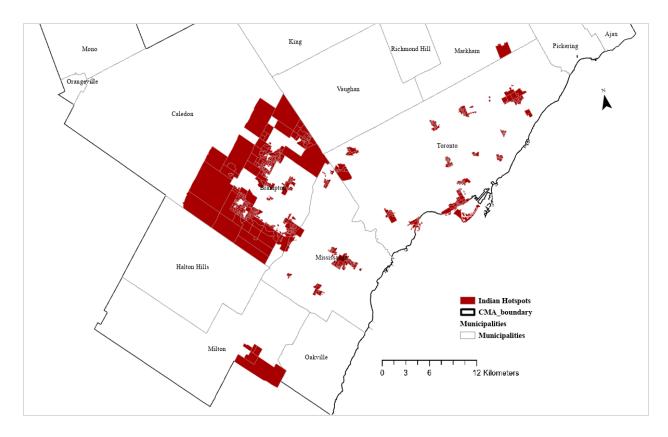

Figure 5.5 Hotspot Settlement Locations of Immigrants from India.

To quantify the concentration of Indian immigrants, the percentage of the sum of Indian immigrants in the hot spot DAs to the Total Indian immigrants in the municipalities is tabulated (Refer to Table 5.1).

| Municipality | Total Indian Immigrants in the Municipality | Tot Ind. Immigrants in the Hotspots | Total Number of DAs in the Municipality | Number of Hotspot DAs | Percentage of Hotspot DAs (%) | %of Indian Immigrants |
|--------------|--|--|--|-----------------------------|-------------------------------------|--------------------------|
| 1 | 2 | 3 | 4 | 5 | (5/4) x100 | (3/2) x 100 |
| Brampton | 159445 | 115350 | 684 | 282 | 41.2 | 72.34 |
| Caledon | 7360 | 5195 | 93 | 9 | 9.7 | 70.58 |
| Toronto | 95745 | 27130 | 3743 | 215 | 5.7 | 28.34 |
| Mississauga | 60065 | 15040 | 969 | 82 | 8.5 | 25.04 |
| Milton | 8375 | 1540 | 134 | 5 | 3.7 | 18.39 |
| Markham | 13720 | 1405 | 338 | 2 | 0.6 | 10.24 |
| Ajax | 6680 | 615 | 172 | 2 | 1.2 | 9.21 |

 Table 5.2 Percentage of Indian immigrants in the Indian hot spot DAs

A clear clustering can be observed in the municipalities. For example, in Caledon approximately 70% of Indian immigrants are concentrated in just 10% of the DAs in the Municipality, indicating significant clustering and a tendency of immigrants to prefer specific locations. Similarly, Brampton is clearly an Indian enclave, with 72.3% of Indian immigrants concentrated in 41% of the DAs.This clustering is evidence of segregation among the Indian immigrants.

To identify any similarities among the immigrants, an analysis of the top seven Indian languages recorded in the Brampton hotspots was conducted. The study revealed that approximately 54% of the population speaks Punjabi, followed by 33% who speak Hindi, which is closely related to Punjabi (see Table 5.2).

Table 2.3 Percentage of major Indian language speakers in the Indian hot spot DAs

| Municipality | | | Total | | | | | |
|--------------------|--------------|-----------------|-------------|---------------|-------------|------------|---------|----------|
| | Kannada | Malayalam | Telugu | Gujarati | Hindi | Marathi | Punjabi | Speakers |
| Brampton | 945 | 3105 | 3460 | 23170 | 79815 | 1710 | 132055 | 244260 |
| | 0.4% | 1.3% | 1.4% | 9.5% | 32.7% | 0.7% | 54.0% | 100% |
| Source: Statistics | Canada. Tabl | e 98-10-0217-01 | l. Knowledg | e of language | es by age a | nd gender: | | |

Nearly 85% of Indian immigrants in the Brampton hotspots speak either Punjabi or Hindi. Consequently, Brampton can be aptly referred to as "Little Punjab." Language, ethnic businesses, and places of worship could be significant factors influencing these preferences and enclave formation.

Pakistani Hotspots

Pakistani immigrants are primarily settled in the suburban municipalities of Milton and Mississauga in the west, and Ajax in the east of the CMA (refer to Figure 5.5). The top two municipalities, in order, are Milton and Mississauga. Although there are some hotspots in Ajax, Markham, and Vaughan, the proportion of the Pakistani immigrant population in these areas is relatively low (see Table 5.3). Upon analyzing the Pakistani hotspots in the Milton area, it was found that the Louis St. Laurent (LSL) area is heavily concentrated with Pakistani immigrants. Oakville is another notable location for Pakistani immigrants.

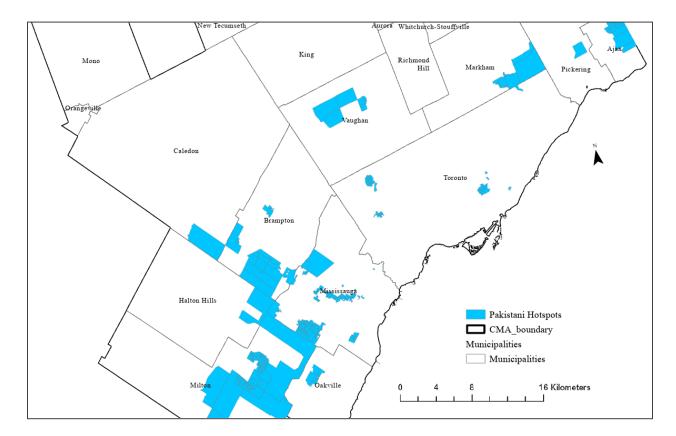

Figure 5.6 Hotspot Settlement Locations of Immigrants from Pakistan.

| Vaughan | 4560 | 2490 | 288 | 7 | 2.4 | 54.6 |

Note: Caledon, Pickering and Bradford West Gwillimbury Municipalities are excluded in this table as there is only 1 DA in each Municipality

Bangladeshi Hotspots

Immigrants from Bangladesh are mainly found in East Toronto, adjacent to Scarborough, along Victoria Avenue and Danforth Avenue (refer to Figure 5.6). Unlike their counterparts, who are spread widely across the southern CMA, the settlement locations of Bangladeshi immigrants are confined to East Toronto, forming an enclave within the City of Toronto. This proves the literature of Bangla Town' discussed in Chapter 3. Exceptionally, there are few Bangladeshi settlements in Brampton.

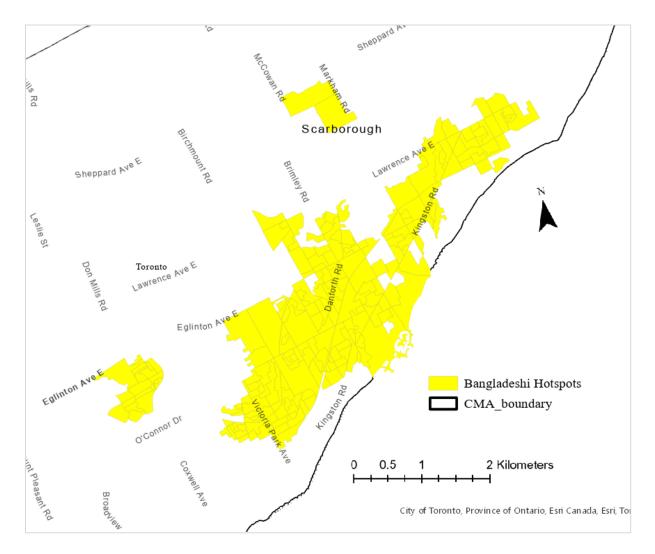

Figure 5.7 Hotspot Settlement Locations of Immigrants from Bangladesh

Almost 60% of Bangladeshi immigrants in the city of Toronto are located in 6% of the DAs on the eastern side, making "Danforth" a "Bangladesh Enclave." Most of them are Bengali speaking (See Table 5.4). There are many ethnic businesses in this area. Though it can be called an enclave, the Bangladeshi population is still very small compared to the city's population. Nevertheless, it is a favourite spot for Bangladeshis. More on the ethnic food businesses functioning here will be explored in the subsequent sections.

| Municipality | Total Bangladesh Immigrants in the City | Total Bangladesh Immigrants in the Hotspots | Total Number of DAs | Number of Hotspot DAs | Percentage of Hotspot DAs (%) | % of Bangladesh Immigrants | |
|--------------------------|--|---|---------------------------|--------------------------------|-------------------------------------|----------------------------------|--|
| 1 | 2 | 3 | 4 | 5 | (5/4) x100 | (3/2) x 100 | |
| Brampton | 1235 | 35 | 684 | 2 | 0.3 | | |
| Scarborough (Toronto) | 21915 | 13770 | 3743 | 244 | 6.5 | 6. | |

3

Table 5.5 Percentage of Bangladeshi immigrants in the Bangladesh hot spot DAs

Sri Lankan Tamil's Hotspots

Sri Lankan immigrants, when compared to the other three ethnic groups under study, are widespread across the CMA. However, their settlements are heavily concentrated on the east side of the City of Toronto, particularly in the Scarborough area, and spread to the northern and eastern sides towards Markham, Pickering, and Ajax, respectively (refer to Figure 5.7). The Scarborough area in the city of Toronto is a Sri Lankan hotspot. Markham, Ajax, and Whitchurch-Stouffville are emerging hotspots, but their populations there are considerably lower compared to that of Toronto. Additionally, there are notable hotspots in Brampton, Pickering and Vaughan (see Table 5.5).

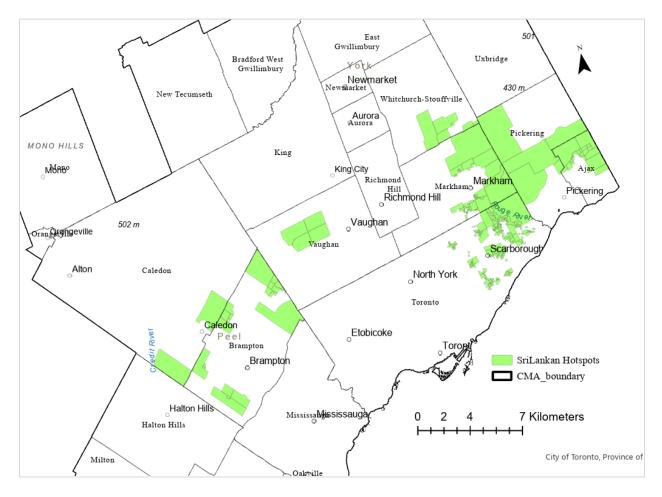

Figure 5.8 Hotspot Settlement Locations of Immigrants from Sri Lanka.

5.2. Rent Analysis of South Asian Hotspots.

As identified in Chapter 3, there is a rental crisis in the CMA, with immigrants playing a key role in driving this housing demand. Higher rents are indeed a barrier for immigrants to integrate into society. To determine if there are more rented households in the identified hotspots, the percentage of rented households in the total population is mapped for all municipalities (see Figure 5.9). Nearly 48% of households in the City of Toronto are renters. Among the seven hotspot municipalities identified, Brampton and Mississauga have notable proportions of renter households, at 30% and 22%, respectively.

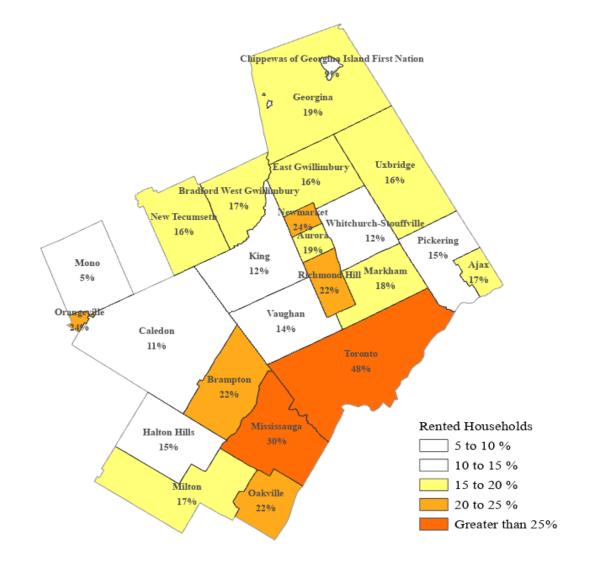

Figure 5.9 The proportion of rented households compared to the total number of households in each municipality.

We lack sufficient data to confirm whether these renters are South Asians. As discussed in previous sections, the South Asian population is concentrated in the southern part of the CMA, with only a small proportion of South Asian immigrants settling in the northern areas. Although South Asians are widespread in Toronto, their proportion is relatively low (6.7%) compared to the city's large population. However, of the 100,000 recent South Asian immigrants (2016-2021), 39% settled in the City of Toronto, followed by Brampton (32%) and Mississauga (16%) (see Figure 5.2). Analyzing rent for the entire CMA is beyond the scope of this research; therefore, we focus on the two municipalities with a pronounced South Asian concentration and a significant number of renters—Brampton, Mississauga and the City of Toronto.

Initially, the "average expenditure on rent" variable from the 2021 Census of Population was used to analyze rents. However, these rates were significantly below current market rates. Therefore, quarterly rental reports from the Toronto Regional Real Estate Board (TRREB) were examined to understand rental patterns and historical trends in these areas, shedding light on the rental crisis and the potential barriers for South Asians to integrate into society. TRREB released the latest rental report for the first quarter on April 30, 2024. To maintain consistency, Q1 reports from 2014 to 2024 were used. These reports are available on their website.

Brampton

Earlier in this chapter, Brampton was identified as an enclave with a majority Punjabispeaking Indian population. To analyze the increase in rental rates, the average rent of bachelor, one-bedroom, and two-bedroom apartments was plotted from 2014 to 2024. Bachelor apartments saw a 54% increase, one-bedroom apartments saw a 68% increase, and two-bedroom apartments saw a 71% increase (see Figure 5.10). Across the entire CMA, the average rent of a one-bedroom apartment was \$1,573 in Q1 2014 and \$2,441 in Q1 2024, a 55% increase. However, in Brampton, one-bedroom apartments saw a 68% rise, which is 13% above the overall average.

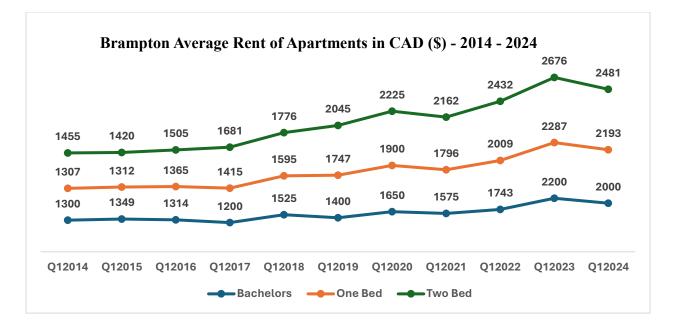

Figure 5.10 Average rent of Bachelors, One-Bed and Two-Bed Apartments in Brampton

Brampton is an enclave with a high level of "institutional completeness," offering many amenities that the community needs. This attracts newcomers from the same community who prefer to settle in locations where they do not have to search for necessities like groceries and places of worship.

Raymond Breton introduced the concept of "Institutional completeness" in his study, *Institutional Completeness of Ethnic Communities and the Personal Relations of Immigrants,* which refers to how well an ethnic community provides necessary services to its members. The study found that a high degree of institutional completeness is linked to factors like language differences and limited resources among group members, which can create a strong support network within the ethnic community. The degree of completeness was assessed by examining institutions like churches, welfare organizations, and newspapers.

No community can achieve complete institutional completeness, as they still rely on external institutions, such as schools. However, in some cases, ethnic groups establish private schools that cultivate their specific culture and traditions. In the case of Brampton, it exhibits a higher level of institutional completeness.

As analyzed in Breton's work, Punjabi communities in Brampton have their communityspecific worship places (Gurudwaras), welfare organizations, and newspapers. They also have their own media in their language, including TV channels like Sur Sagar TV, radio channels like Rangla Punjab Radio, and newspapers in Punjabi such as Parvasi Newspaper and Ajitweekly. Additionally, there are a handful of private schools where Sikh principles and values (a religion followed by many Punjabi-speaking people) are taught. This is a condition where a group within a larger society reproduces major institutions—economy, politics, family, schooling—enabling the smaller group to have little social connection with the larger society (Drislane & Parkinson, 2016). It is also possible for immigrants to remain unintegrated. The ethnic-specific facilities Brampton offers make it a popular destination for temporary residents, like international students from India.

International students who want to be part of an established community with a status of institutional completeness often compromise their living conditions to stay within their community. Recently, the city's bylaw department discovered 25 students living illegally in a basement. Landlords operating these illegal rentals evade taxes and subject tenants to potentially hazardous living environments. These landlords find it financially lucrative to cram multiple tenants into cramped spaces, foregoing proper accommodations for profit. Despite initial efforts by the city council to regulate these practices, including mandatory registration for rental unit owners, opposition from landlords led to a temporary halt (Toronto Sun, February 1, 2024).

Following the recent discovery of 25 students living in overcrowded conditions, Brampton Mayor Brown intends to reintroduce measures to address the issue. The incident underscores the urgent need to ensure safe and compliant living conditions for all residents, particularly vulnerable populations such as international students. However, as long as students are "willing" to live in such hazardous conditions, illegal basement rentals will continue to exist. It is clear that temporary residents, like international students, prefer such enclaves and are willing to sacrifice their comfort to be with their friends and family. As discussed in Chapter 2, this reflects the "Settlement Phase," where the immediate physical and social environments, referred to as the "microsystem," determine their settlement locations.

However, as migration slows or other ethnicities move into these neighbourhoods, these communities and their institutions may eventually fade. But as Breton argued, these groups can constitute a public for ethnic organizations and create opportunities for social entrepreneurs. The organizations established by these entrepreneurs will maintain themselves as long as there is a public to use their services or as long as the ethnic identity of the organization remains important to the members of the ethnic group.

Mississauga

Mississauga was identified as a popular area for South Asians, with Indian and Pakistani hotspots. To analyze the increase in rental rates, the average rent of bachelor, one-bedroom, and two-bedroom apartments was plotted from 2014 to 2024. Bachelor apartments saw a 56% increase, one-bedroom apartments saw a 74% increase, and two-bedroom apartments saw a 67% increase (see Figure 5.11). This is 19% higher than the overall increase in the CMA, which was 55% for one-bedroom apartments.

Figure 5.11 The average rent of Bachelor, One-Bed and Two-Bed Apartments in Mississauga

Mississauga has a mix of high-density residential areas and commercial spaces like warehouse, industrial or office space premises. Compared to Brampton, Mississauga is more

urbanized. While Brampton attracts international students with its cheaper accommodation, Mississauga attracts young working professionals due to its proximity to many companies.

Mississauga offers South Asian immigrants, particularly those from India, a pathway to selective acculturation, where they navigate a middle ground between mainstream society and their native culture. They may adopt specific elements of the dominant culture while retaining ties to their ethnic identity. Although Mississauga has a significant South Asian population, with 40% of visible minorities identifying as South Asian, it doesn't have as many ethnic-focused establishments and businesses as Brampton. Therefore, South Asians in Mississauga may choose to interact socially within their ethnic community, participating in community events or ethnic organizations, while also engaging with the broader society for work, education, or other essential activities. For example, South Asians celebrate a free festival called Mosaic, featuring South Asian art, culture, heritage, and cuisine at Mississauga's Celebration Square every year. However, they also learn the host country's language to succeed in the job market. On the other hand, immigrants with language barriers often prefer ethnic integration and choose to live in enclaves like Brampton, where they can thrive despite language barriers, as many people in local businesses there understand their language.

The City of Toronto

Unlike earlier settlements in Brampton or Milton, recent immigrants have not formed enclaves in the City of Toronto. Analyzing the City of Toronto as a whole is too broad; therefore, rental rates in the 35 TRREB regions within the City of Toronto were examined using a heat map representing the average rent of bachelor, one-bedroom, and two-bedroom apartments in these regions for the years 2014, 2019, and 2024 (refer to Table 5.7). The average rent is higher in Central Toronto compared to the East and West. Eastern Toronto, which used to have lower rents compared to Central Toronto, is also changing. Areas like Scarborough, particularly the Malvern region, have seen significant increases. However, there is no consistent pattern among the regions, as all districts are experiencing a rent crisis. Specifically, for one-bedroom apartments, except for some areas like Rouge Hills Drive District, this trend is not limited to South Asians; in general, recent immigrants are settling in Central Toronto. Easy access to the subway and buses may be a contributing factor.

Regarding South Asians, early immigrants primarily settled in eastern Toronto, with significant Sri Lankan and Bangladeshi communities. However, recent South Asian immigrants are increasingly settling in Central Toronto, in areas like Downtown (TC01), Church-Yonge (North York (TC14), and Don Mills (TC15), where we identified some notable hotspots where the average rent for one-bedroom apartments is above average. The rental rates are around the average values in Pakistani hotspot locations like Thorncliffe Park (TC11) and East York (TE03). However, these are older settlements, and the percentage of recent South Asian immigrants among the total South Asian immigrant population is low at 20% and 26%, respectively (refer to Table 5). The Sri Lankan hotspots Malvern (TE11), Agincourt (TE07), and Woburn (TE09) in eastern Toronto are below average in terms of rental values. These hotspots serve as enclaves for Sri Lankan immigrants. Similarly, the Bangladeshi hotspots identified in the previous section, like Birchmount Rd and St. Clair Avenue E (TE04) and Cliff Crest (TE08), are all below average, except for bachelor apartments. As discussed in the first section of this chapter, although 39% of recent South Asian immigrants settled in the City of Toronto, there has been a decline in the South Asian population in Toronto after 2016, with more South Asians moving to regional municipalities like Caledon, Ajax, and Pickering. This may be one of the reasons for the below-average rents in inner suburban areas like Scarborough. It also supports the "Invasion Succession Model" discussed earlier in this chapter, where preceding immigrant waves move outward and are succeeded by more recent immigrants. In ethnically rich inner suburbs like Scarborough, where established immigrants are moving outwards, neighborhoods like Malvern are experiencing lower demand among ethno-specific immigrants. Additionally, once an enclave becomes saturated, people from outside the community may be less interested in such locations. On the other hand, in more diverse areas not limited to a specific community, such as Central Toronto locations like North York, there is a high demand for rental units, which drives up rental prices.

Table 5.7 The Avg. Rent of bachelor, one-bedroom, and two-bedroom apartments in the 35 TRREB district of the city of Toronto for the years 2014, 2019, and 2024.

Average Rent

Average

Above Average

Below average * TC represents Toronto Central, TE -Toronto East and TW- Toronto West

*When Average Rent is not available for any district the average of the region is taken. * The example community doesn't represent the whole district; one community name is given to identify the area.

Regarding other hotspot municipalities like Caledon or Milton, the number of rental units is comparatively low, with many residents likely being homeowners. Immigrants who bring some capital can afford to buy homes by making a down payment. In suburbs like Caledon, where a detached house can be purchased for under \$1 million, they can make monthly mortgage payments as low as \$4,500. However, if they buy a detached house in the city center, which costs around \$1.5 to \$2 million, their minimum monthly mortgage payment would be no less than \$6,000 (analyzed using market rates available on Strata.ca, assuming a 20% down payment, 5 Year variable interest rate of 5.84%, and an amortization period of 25 years). As a result, suburban municipalities are popular among immigrants who prefer detached houses. Yahoo Finance identifies the most competitive markets in Ontario, where homes sell rapidly, including London, Ajax, Oshawa, Newmarket, Pickering, Milton, and Orangeville (Yahoo Finance, Financial Post, July 25, 2023). On the other hand, for those who prefer apartments, the city offers affordable options below \$1 million. If they have the initial capital for the down payment, they can manage these payments; otherwise, it may not be feasible.

It is also evident that younger South Asians, particularly international students from India, are more impacted by the rental crisis, leading them to select unsafe living conditions. Additionally, immigrants who stick to enclaves tend to experience "Ethnic Assimilation" and have less interaction with the mainstream community. In contrast, South Asians who prefer to integrate into society choose an upward trajectory toward greater socio-economic integration, as discussed in Chapter 2. These recent immigrants who settle in areas like central Toronto integrate more easily than their counterparts.

5.3. Correlating South Asian Settlement Patterns and Food Retail Dynamics

Mapping ethnic groceries and finding correlations with ethnic settlement locations can provide valuable insights into various social, economic, and cultural dynamics within a community. Hence, the locations of South Asian grocery stores, restaurants, and other take-out options available in the Toronto CMA are web-scraped from OpenStreetMap and Google Maps and overlaid alongside the South Asian hotspots (See Figure 5.12). Nearly 191 grocery stores and 600 restaurants were identified (List attached in Appendix)

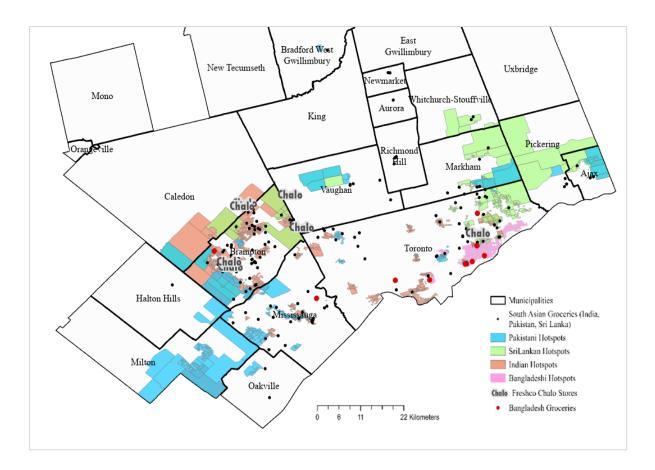

Figure 5.12 South Asian Grocery stores in the CMA

Grocery Stores

Among the four ethnic groups taken for the study, Pakistani groceries are often labelled as Indian and Pakistani. Likewise, Sri Lankan groceries are labelled as Tamil and South Indian, as they share similarities in their cooking styles and most of them are in Scarborough. Hence Sri Lankan and Pakistani grocery stores are also labelled as Indian. Most of the Indian stores are concentrated in the Brampton municipality which is an Indian enclave. Bangladeshi groceries are more specific, selling vegetables and fish some of which are unique to Bangla cuisine. There are around ten stores in the CMA, primarily in Scarborough which is a Bangladeshi hotspot (Refer to Table 5.8). Like the Bangladeshi community, Sri Lankans have specific groceries and vegetables. These shops primarily serve their communities and are often located in ethnic strip malls in Sri Lankan hotspots, which are widespread in both Scarborough and Brampton.

| Ethnicity | Number of Grocery Stores |
|---------------|-----------------------------|
| Bangladesh | 10 |
| Freshco Chalo | 7 |
| Indian | 113 |
| Pakistan | 29 |
| Sri Lankan | 32 |
| Total | 191 |
| | |

Table 5.8 Distribution of South Asian Grocery stores by ethnicity in the Toronto CMA

Unlike other ethnic groups such as the Chinese and Korean communities in the CMA, where large-sized grocery retailers like T&T Supermarket (Owned by Loblaws) and Galleria serve their needs, South Asian groceries are typically small or mid-sized grocers serving their communities. However, some mid-sized grocers operate chains of stores, such as Panchavati and Subzi Mandi. Similarly, "Iqbal Foods," a mid-sized Indian/Pakistani grocery store with a branch in North York, operates 24/7 because of the high demand in that area, where most customers are recent immigrants.

South Asians also rely on mainstream grocers for staple items like cheese or drinks. Mainstream retailers, in turn, attract ethnic buyers by including South Asian or Indian aisles in their supermarkets. A large collection of Indian groceries can be found in Walmart and No Frills. Sobey's took the lead by opening its first South Asian-focused FreshCo store in August 2015 in Brampton. Branded as Chalo FreshCo (chalo meaning "let's go" in Indian languages like Punjabi, Hindi, Marathi, Gujarati, and Bengali), it is billed as the first grocery store in Canada for "desis." There are now seven Chalo FreshCo stores in the CMA, with six in the Brampton area and one in Scarborough (see Figure 5.12).

"Whether you're looking for bhindi (Hindi word for Okra) and basmati, or apples and cheese, Chalo! FreshCo is your one-stop shop where you can find everything on your grocery list at low prices," is the statement on their website. We can see a wide variety of South Asian groceries in their flyer. (See Figure 5.13) They not only target South Asians but also offer ethno-specific groceries for Caribbean, Middle Eastern, and European ethnic groups. South Asians prefer halal meat. Although packaged meats are available, reflecting their beliefs, halal meat shops and Star Fish Caribbean Market counters are available inside Chalo stores (See Figure 5.14). This is

evidence of the CMA's changing food landscape. As the current cohorts are diverse, Retailers are adopting such ethno-specific strategies to stay ahead in the competitive market.

Figure 5.13 Chalo FreshCo Flyer (July 2024)

Figure 5.14 Halal Meat Shop and Starfish Caribbean Market inside the Chalo Freshco (Mississauga & Financial)

In general, these grocers cannot establish a large market when located outside their hotspots; thus, most can be found in South Asian-rich neighborhoods. However these ethnic grocers pave the way for economic integration of ethnic communities and their participation in local economies. Also, the locations can serve as social hubs where members of the community gather, reinforcing community bonds and cultural identity. As South Asians expand into the northern CMA, where there are only a few shops, there is significant market potential to attract ethnic buyers. Big retailers that adopt retail models like Chalo FreshCo can attract more regional groups.

Restaurants

Compared to grocery stores, South Asian restaurants are more established in the CMA. They range from lavish upscale restaurants to fast-food counters, with nearly 600 restaurants, including online delivery services, in the CMA.

According to <u>Snappy</u>, a service company providing ordering dashboards and website marketing, research on Toronto restaurants involved analyzing 9,378 restaurants in the city of Toronto using data from Google Maps. As per the research, the most popular restaurant categories in Toronto include coffee shops, hamburgers, Indian, Mexican, pizza, fast food, Greek, bubble tea, Chinese, and others. Among the various cuisine options throughout Toronto, Chinese cuisine has the highest number of categorized restaurants with 308. This is followed by Indian (278), Italian (231), Japanese (144), Mexican (139), Korean (137), and Thai (106) restaurants (Snappy, 2023). The high number of Indian restaurants in the city of Toronto indicates the significant presence and demand for Indian cuisine (see Figure 5.15). There are nearly 600 restaurants in the CMA including the Takeout restaurants (See Table 5.9).

| Ethnicity | Туре | Number of Restaurants |
|------------|---------------------|-----------------------|
| | Bangladeshi Dine In | 9 |
| Bangladesh | Bangladeshi Takeout | 1 |
| - | Total | 10 |
| | Indian Dine In | 380 |
| | Indian Fast Food | 21 |
| Indian | Indian Food court | 9 |
| | Indian Takeout | 28 |
| | Total | 438 |
| | Pakistani Dine in | 80 |
| Pakistan | Pakistani Fast food | 1 |
| Pakistan | Pakistani Takeout | 15 |
| | Total | 96 |
| | Sri Lankan Dine in | 8 |
| | Sri Lankan Takeout | 46 |
| Sri Lanka | Sri Lankan | 54 |
| | Grand Total | 598 |

Table 5.9 Distribution of South Asian Restaurants by National Groups in the Toronto CMA

Source: Web scraped from Google Maps, Open Street Maps, Uber Eats & Doordash

There are also many home-based food delivery services that cater to the needs of South Asians using Facebook or WhatsApp. These small caterers are often not listed on Google Maps, making them difficult to document. While Indian restaurants are widespread, other ethnic outlets are more concentrated in the hotspot municipalities identified (refer to Table 5.10). Additionally, some restaurants are scattered across Newmarket, Whitchurch-Stouffville, Aurora, Caledon, and Halton Hills.

| Municipality | Indian | Pakistani | Sri Lankan | Bangladesh | Total |
|-----------------|--------|-----------|---------------|------------|-------|
| City of Toronto | 195 | 29 | 24 | 10 | 258 |
| Mississauga | 80 | 29 | 9 | 0 | 118 |
| Brampton | 59 | 7 | 7 | 0 | 73 |
| Vaughan | 23 | 6 | 1 | 0 | 30 |

| Pickering | 5 | 5 | 0 | 0 | 10 |

Table 5.10 Distribution of South Asian Restaurants/takeouts in the Hotspot Municipalities

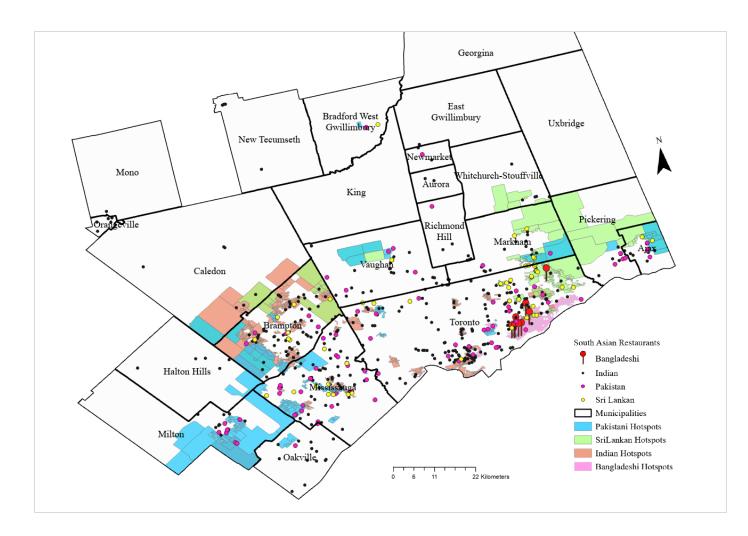

Figure 5.15 South Asian restaurants and takeouts in the Toronto CMA

While Indian and Pakistani groceries have similarities, their cuisine differs, resulting in many Pakistani restaurants offering distinct authentic dishes. These restaurants are widespread in Pakistani hotspots. Indian restaurants are more established, even in areas with few or no Indians in the neighbourhood. There are many modern and upscale restaurants like Curryish Tavern. Moreover, there are a variety of restaurants like The Kettle and Gully, which serve Indo-Canadian fusion dishes such as Indian-style poutine. Fusion restaurants like Aroma Indian Bistro (Indo-Caribbean) and Matagali Restaurant (Indo-Thai) also add to the diversity.

Sri Lankan restaurants are typically counter-served takeout models, with only a few dinein options serving their community. Like their grocery counterparts, Bangladeshi restaurants are very specific to their neighbourhoods, offering ethnic-specific dishes. Though there are only a few, most are dine-in establishments with basic contemporary-style seating. In general, restaurants outnumber grocery stores. This reflects that South Asians rely on ethnic grocers only for some specific items, while depending on mainstream grocery stores for their broader needs. Additionally, many online delivery options cater to their preferences.

Though there is evident economic integration in food retailing, it mostly occurs on a small scale, with local businesses either serving in ethnic strip malls or operating mid-sized stores that attract South Asians in the neighbourhood. However, these stores often struggle to compete with mainstream retailers.

Despite their smaller scale of participation in the retail market, these businesses provide opportunities for economic establishment and help immigrants integrate into the local market. For immigrants, these outlets offer a chance to enjoy and preserve their ethnic cuisine. This phenomenon aligns with what we refer to as the 'Establishment Phase' in Chapter 2, where certain immigrants navigate psychological and social dynamics to establish themselves in a new society while maintaining their cultural ties.

5.4. South Asian participation and representation in Canada's political realm

As discussed in earlier chapters, the ultimate phase of immigrant assimilation in a host society involves increasing political participation. Immigrants, driven by the desire to voice their concerns on specific matters, often become actively involved in political activities. To gauge the level of participation of South Asians in Canadian politics within the Toronto CMA, the candidate lists from the 2021 federal election, the 2022 provincial election, and the 2022 municipal elections were analyzed.

In 2021, within the Toronto CMA, 50 South Asian candidates ran for the federal election, including 15 Indian, 23 Pakistani, 4 Sri Lankan, and 7 Bangladeshi candidates. Of these, 6 Indian and 3 Pakistani candidates were elected (refer to Table 5.11 and Figure 5.16). The overall success rate was only 18%. Bangladeshi and Sri Lankan candidates did not get elected.

| Municipality | South Asian | IN | PK | LK | BD | Elected | Remarks | Riding |

| Total | 50 | 15 | 23 | 5 | 7 | 9 | | |

Table 3 Federal Election 2021: South Asian Candidates in Toronto's CMA.

It can be observed that South Asian electoral candidates predominantly ran in eight municipalities with significant South Asian populations: Ajax, Brampton, Markham, Milton, Mississauga, Oakville, Toronto, and Vaughan. Many Indian candidates reside in Brampton and Mississauga. After analyzing the roots of the candidates, it is clear they either came to Canada at an early age, often under 10 years old, and received their major education here, or were born in Canada. Besides their ancestral origin, some common qualities among these candidates are their community engagement, immigrant experience, dedication to public service, participation in activities that foster a sense of community and belonging among immigrants, and strong educational backgrounds, all of which have played a crucial role in their electoral success (See Table 5.12.).

Table 5.12 Federal Election 2021: South Asian Elected Candidates in Toronto's CMA.

| MP Name | Riding | Origin | Age When immigrated | Community Contributions & Roles | |
|--|------------------------------------|------------------|--|--|--|
| The Hon'ble Shafqat Ali | Brampton Centre | Pakistan | 10 | Formed youth sports club, organized festivals, and fundraisers, and supported community organizations. | |
| The Hon'ble Anita Anand | President of the Treasury Board | India | born and raised in rural Nova Scotia, she moved to Ontario in 1985. | Elected at Oakville. She has previously served as Minister of National Defence and as Minister of Public Services and Procurement. served on the Board of Directors of the Lighthouse Program for Grieving Children, the Oakville Hospital Foundation. | |
| The Hon'ble Iqra Khalid | Mississauga— Erin Mills | Pakistan | 8 | She is a champion for women's issues, access to justice, and human rights in Canada and globally. | |
| The Hon'ble Iqwinder Gaheer | Mississauga— Malton, Ontario | India | 6 | Iqwinder received his Juris Doctor from Harvard Law School in 2019. Passionate about the rights of disparate groups | |
| The Hon'ble Sonia Sidhu | Brampton South | India | Early 20s | Moved to be with husband and arrived in Winnipeg in 1992. | |
| The Hon'ble Salma Scarborough Zahid Centre | | Pakistan | Not known | Advocated for racialized Canadians and visible minority women, improved the immigration system, initiated Multifaith Council. | |
| The Hon'ble Maninder Sidhu | Brampton East | India | Not known | Elected in 2019, re-elected in 2021, resides in Brampton with family for more than 30 years. | |
| The Hon'ble Arif Parkdale—High Virani Park, Ontario | | Uganda/ India | Not Known | Came as a Refugee. Multilingual Ismaili Muslim, family supported by YMCA, established in Toronto. | |
| The Hon'ble Kamal Khera Brampton West | | India | (not specified) | Minister of Diversity, Inclusion, and Persons with Disabilities since 2023, elected at age 26, one of the youngest women ever elected to Parliament. | |

Additionally, the elected candidates are long-time residents of their constituencies. To be known and successful at a federal level, these candidates have a long history of dedication. These municipalities, which are cultural and social hubs for the South Asian community, not only reflect the demographic composition but also significantly influence the political landscape, ensuring that the interests of this vibrant community are represented.

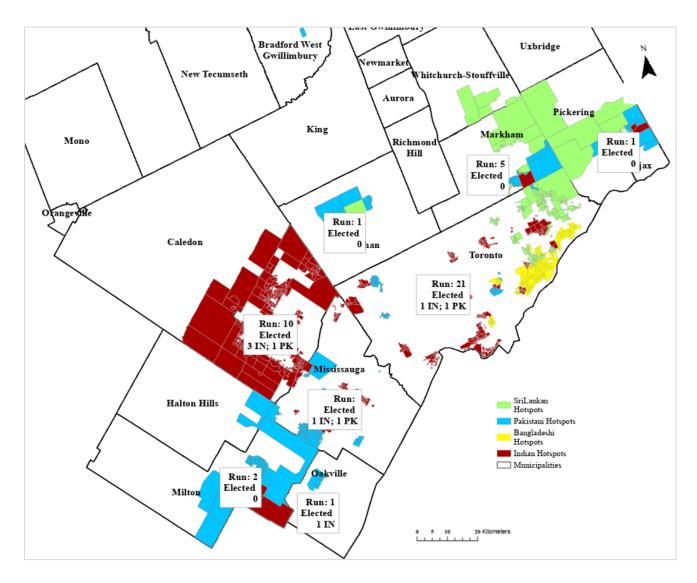

Figure 5.16 2021 Federal Election: South Asian Candidates in Toronto's CMA.

In the 2022 provincial election, 46 South Asian candidates ran in the Toronto CMA, and 10 were elected (refer to Table 5.13 and Figure 5.17), with a success rate of 25%. Understandably, ethnic politicians are better known at the provincial than at the national level. As identified in the first section of this chapter, Brampton and Milton are hotspots for Indian and Pakistani communities, respectively, and where the respective ethnic candidates won. In Mississauga, which has an equal strength of Indian and Pakistani populations, the results were mixed. It is also notable that Sri Lankan candidate Vijay Thanigasalam was elected in Scarborough-Rouge Park, where Sri Lankan immigrants are more concentrated, and Doly Begum was elected in Scarborough

Southwest, where Bangladeshi communities are prominent. She is the first Bangladeshi Canadian to be elected to a legislative body in Canada.

| Municipality | South Asian Candidates | IN | РК | LK | BD | Elected | Riding |
|--------------|------------------------------|----|----|----|----|---------|--|
| Ajax | 1 | | 1 | | | 0 | |
| Brampton | 12 | 8 | 2 | | 2 | 3 | Brampton East, Brampton West, Brampton South- 3(IN) |
| Markham | 2 | | 1 | 1 | | 0 | |
| Milton | 3 | 1 | 2 | | | 1 | Milton (IN) |
| Mississauga | 12 | 2 | 8 | 1 | 1 | 3 | Mississauga East—Cooksville (PK); Mississauga—Malton (IN); Mississauga—Streetsville (IN) |

| Pickering | 1 | | 1 | | | 0 | |
| Toronto | 14 | 3 | 7 | 2 | 2 | 3 | Don Valley East (IN); Scarborough SW(BG); Scarborough-Rouge Park (LK) |
| Total | 46 | 13 | 23 | 4 | 6 | 10 | |

Table 5.13 Ontario Provincial Election: South Asian Candidates in Toronto's CMA.

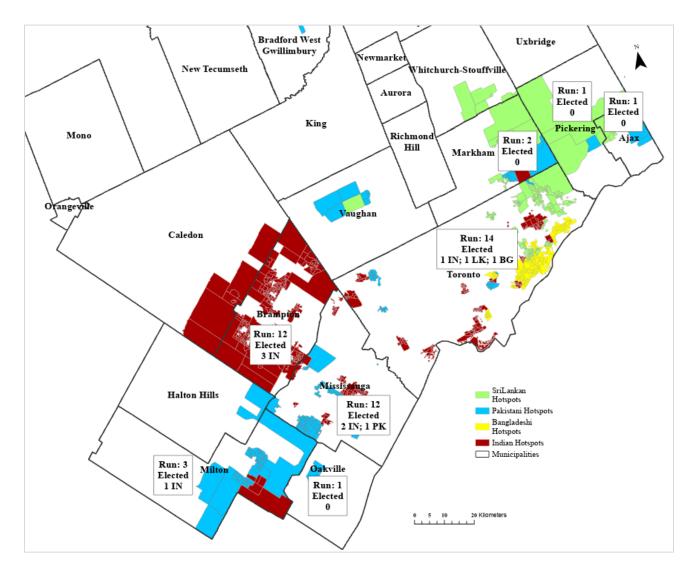

Figure 5.17 2022 Ontario Provincial Election: South Asian Candidates in Toronto CMA.

In 2022, within the Toronto CMA, 146 South Asian candidates ran for the municipal election, including 61 Indians, 56 Pakistanis, 16 Sri Lankans, and 13 Bangladeshis. Of these, only 10 candidates were elected, which is merely a 7.5% success rate (refer to Table 5.14 and Figure 5.18). Unlike the federal and provincial levels, where the candidates are party-nominated and only one per riding, any individual can register as a candidate in the municipal elections. As the candidates are not party-based in the municipal elections, the participation rate is higher in the municipal elections than at the provincial or federal level.

| Municipality | SA | IN | LK | РК | BD | Elected | Remarks | Riding/Council |

| Total | 146 | 61 | 16 | 56 | 13 | 11 | | |

Table 5.14. 2022 Municipal Election: South Asian Candidates in Toronto's CMA.

Pakistani-origin candidates outperformed in the Milton area, where we identified many Pakistani hotspots. It is clear that at the municipal level, the community, with ethnic support, is favourable and has received full support in the election. The same applies to the Sri Lankan candidates elected in Markham and the Indian candidates in the Brampton municipalities, which also have their ethnic hotspots.

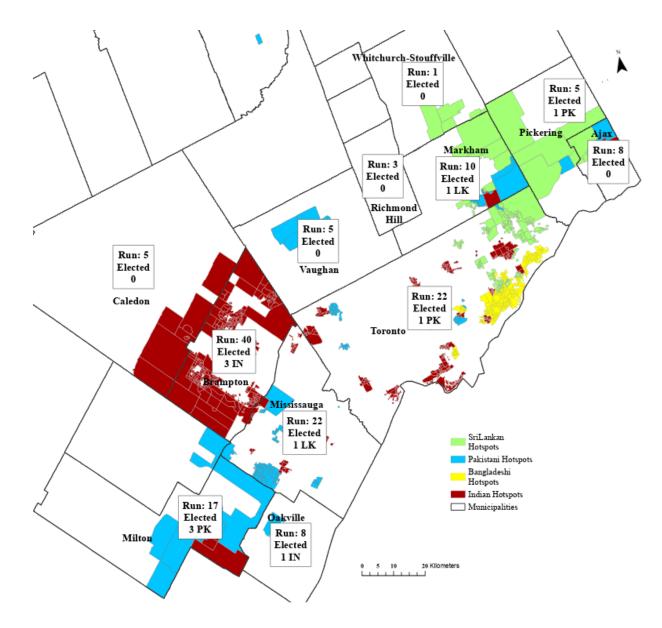

Figure 5.18 Municipal Election: South Asian Candidates in Toronto CMA.

After analyzing the participation of South Asian candidates in the CMA in federal, provincial, and municipal elections, it is clear that they feel a sense of belonging in their neighbourhoods and want to advocate for their communities. In general, at the federal and provincial elections, candidates who are known for their services beyond their community are recognized and receive support from their neighbourhoods. Also, they were either born in Canada or immigrated at an early age and had their education here. This may be one of the reasons for their success, as they adapt to Canadian culture and may be bilingual. It is also evident that Indian and Pakistani-origin candidates are more actively involved in federal-level politics than Sri Lankan and Bangladeshi candidates, but the latter is successful in their ethnic neighbourhoods.

Chapter 6: Conclusions and Recommendations.

In conclusion, this research provides an in-depth analysis of the varied levels of integration among South Asian immigrants in the Toronto Census Metropolitan Area (CMA), with a particular focus on four ethnic groups: Indians, Pakistanis, Sri Lankans, and Bangladeshis. The findings reveal that Indian and Pakistani immigrants exhibit higher levels of integration compared to Sri Lankan and Bangladeshi immigrants, who show a stronger inclination to maintain their ethnic identity. However, there is evidence of segregation among Indian immigrants, where they live in enclaves that are based on sub-ethnic groups.

Settlement patterns across the CMA indicate the formation of distinct ethnic enclaves. Brampton has emerged as an enclave for Indian immigrants, particularly Punjabi-speaking individuals, while Milton serves as an enclave for Pakistani immigrants. Sri Lankan immigrants are primarily concentrated in Scarborough and Markham, with Scarborough also being a significant hub for Bangladeshi immigrants, especially around Victoria Park Avenue and Danforth. Sri Lankan and Bangladeshi immigrants tend to live in selected neighbourhoods within their enclaves, forming 'Ethnoburbs', where they do business within their own networks. They establish community-specific establishments, such as grocery stores and restaurants, particularly in strip malls. This pattern reflects their inclination to maintain cultural ties and a distinct ethnic identity. Though there are segregations among the Sri Lankan and Bangladeshi immigrants they are functionally integrated co-ethnically. Pakistani immigrants, while dispersed, often settle in patterns similar to those of Indian immigrants, particularly in Mississauga and Brampton. The cultural and culinary similarities between these two groups may explain their overlapping settlement patterns, as evidenced by the prevalence of grocery stores and restaurants that cater to both Indian and Pakistani communities. Despite these enclave formations and segregations, there is also evidence of dispersion, particularly among recent Indian immigrants who are scattered throughout the CMA.

The research also highlights a significant increase in the political participation of South Asians within the Toronto CMA. In the 2011 Federal elections, only 10 candidates of South Asian origin ran for election, with none being elected, and most of them were concentrated in Brampton, with a few in Mississauga and Oakville. However, by the 2021 Federal elections, the number of South Asian candidates had increased to 50, with 9 being elected. This period also saw the

emergence of Sri Lankan and Bangladeshi politicians, along with increased participation at the provincial and municipal levels, indicating a higher level of integration among South Asians and the growing inclusivity within political institutions and policy-making processes.

The study effectively addresses its research questions, confirming that while there are no unusual patterns in rental rates directly tied to ethnicity, the demand for housing in ethnic neighbourhoods can indirectly influence rent, particularly affecting younger South Asians, such as international students. The study also identifies emerging and disappearing enclaves, with Little India on Gerrard Street no longer serving as an enclave, while new enclaves are forming in Brampton for Indians, Scarborough for Sri Lankans and Bangladeshis, and Milton for Pakistani immigrants. Also, there is evidence of the "Invasion Succession" model where the recent immigrants settling in the city centre in regions like central Toronto and the predecessors are moving to the regional suburbs like Milton and Pickering. Additionally, the food landscape of the CMA is evolving in response to the demands of South Asian immigrants, with the proliferation of ethnic grocery stores and restaurants altering the region's culinary offerings. The participation of South Asian immigrants and their descendants in the Canadian political landscape is also notable, with Indian and Pakistani immigrants showing advanced levels of engagement at federal, provincial, and municipal levels, while Sri Lankan and Bangladeshi immigrants are more active at provincial and municipal levels. The findings from this research are tabulated for the four ethnic groups (refer to Table 6.1).

Drawing on concepts from cultural anthropology, this research highlights how shared cultural systems influence, and are influenced by, the physical and social environments of immigrant communities. The presence of ethnic food outlets not only meets the practical needs of these communities but also reinforces social ties and cultural continuity, playing a critical role in the broader processes of cultural retention and adaptation within the Toronto CMA.

In a nutshell, South Asians are making progress in their integration into the host society within the Toronto CMA. However, there are sub-ethnic segregations based on religion and language. Despite these divisions, they are integrated within their own ethnic communities and feel that Canada is their home. These findings offer a foundation for devising policies that preserve ethnic identities while promoting inclusivity. As discussed in Chapter 3, while existing literature often focuses on individual South Asian ethnic groups, this study addresses a critical gap by

examining the integration of South Asians as a collective, through various lenses, including settlement, food, and politics. This holistic approach contributes to a deeper understanding of the complexities of immigrant integration within a multicultural urban setting.

Table 6.1 Research Findings

| Description | India | Pakistan | Sri Lanka | Bangladesh |
|---|--|---|--|---|
| No of Immigrants as per 2021 Census | 394,620 | 128,305 | 99,280 | 36,745 |
| Recent Immigrants (2016 - 2021) | 104,245 | 18,110 | 4,935 | 6,035 |
| Immigration Trend | Increasing continuously doubled after 1991 | Peaked between 1991-2000, then decreased | Peaked between 1991-2000, then decreased. | Constant moderate immigration. |
| Favourite Settlement Locations or Hotspots | Brampton, Mississauga, Toronto | Milton, Mississauga | Eastern Toronto (Scarborough), Markham, Brampton | Eastern Toronto (Victoria Pak Avenue & Danforth) |
| Majority Languages | Punjabi, Hindi | Urdu | Tamil | Bengali |
| Settlement Pattern | Earlier immigrants prefer ethnic-specific neighbourhoods; recent immigrants are widespread. | Earlier immigrants prefer ethnic- specific neighbourhoods; recent immigrants are widespread. | Prefer ethnic-rich neighbourhoods | Prefer ethnic-rich neighbourhoods |
| Enclaves | Yes, Brampton | Yes, Milton (Louis St Laurent Area (LSL) | Yes, Scarborough | Yes, Scarborough(Victoria Pak Avenue & Danforth) |
| Emerging Hotspots | Caledon, Milton | Ajax, Oakville | Ajax, Pickering, Whitchurch- Stouffville | Brampton |
| Ethnic Grocery Options | Mainstream specialized stores (e.g., FreshCo (Chalo)), small, mid- sized, online grocery delivery | Small, mid-sized, online grocery delivery | Small in ethnic strip malls | Small |
| Restaurant Options | Lavish to take-out options, various options like Fusion restaurants. | Dine-in to take- out options. | Mostly take-out with few dine-in options | Mostly dine-in with basic contemporary seating. |
| Political Participation | Steadily increasing, successful at federal and provincial levels. | Steadily increasing, successful at federal and provincial levels. | Steadily increasing, successful at provincial and municipal levels | At the initial stage, successful at the provincial level. |

Based on the findings of this research, the following policy recommendations are proposed to enhance the integration of South Asian immigrants in the Toronto Census Metropolitan Area (CMA) while supporting their cultural identities and ensuring equitable access to resources and opportunities:

- 1. **Monitor and regulate rental markets:** Implement policies to monitor rental rates in neighbourhoods with high concentrations of specific ethnic immigrants to ensure affordability.
- 2. Enforce housing regulations in educational institutions: Due to the current rental crisis, international students are living in unsafe conditions. Institutions should be mandated to provide affordable and secure student housing options as part of the admission process, accompanying the issuance of offer letters. This measure would help protect international students from unsafe living conditions and alleviate the pressures of the rental market.
- 3. **Support ethnic businesses:** Provide grants, subsidies, and business development programs tailored to ethnic entrepreneurs, particularly in the food retail and restaurant sectors, to help sustain ethnic businesses.
- 4. **Promote cultural festivals and events in schools:** Support and fund cultural festivals and events that celebrate South Asian heritage. This can enhance the sense of belonging among young South Asian students and promote multicultural understanding among all students.

By implementing these recommendations, policymakers can create a more inclusive and supportive environment for South Asian immigrants in the Toronto CMA, fostering their integration while preserving their cultural identities and contributing to the region's social and economic development.

Future Research Recommendations:

The findings pave the way for numerous research topics. This research is quantitative, relying on figures. To gain insights from a firsthand perspective, qualitative studies can be conducted involving South Asians in focus group settings to unveil firsthand information. The factors influencing their settlement patterns, such as religion, language and their impact on preferred locations, can be studied in detail. The job market, economic prospects, and success of immigrants were not studied in this research and can be taken as a separate research topic.

In conclusion, this study has laid the foundation for understanding the integration of South Asians as a whole. However, future research endeavours should broaden the scope by embracing qualitative methodologies and exploring the intricate interplay of factors in areas where enclave formation is prominent. Investigating the influence of religion and education can further deepen our understanding.
